

## Air Albania Stadium

Albania's newly built national football stadium has been built on the site of its dilapidated predecessor. The Air Albania Stadium, as it is now known, has a seating capacity of 22,500. Sphera flooring was chosen for installation on walls and floor surfaces on the basement level, for instance in the corridors, the changing rooms for players and referees and the stairways leading to other levels. A considerable quantity was also installed on the 2nd floor, which includes the restaurant, corridors and offices for journalists and the Albanian Football Federation.

Project name	Air Albania Stadium
Photographer	Eng.Gezim Beqaj
Location	Tirana, Albania
Installation by	JON shpk
