

Albeda Rotterdam The Hague Airport College

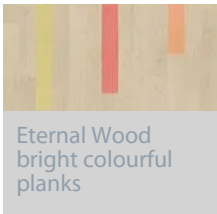

Bureau voor Stedebouw & Architectuur Wim de

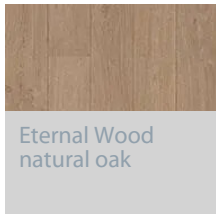

Where do you better learn than in a real life situation? Albeda, a college for intermediate vocational education, realized a training building for aviation students at Rotterdam The Hague Airport. Companies such as TUI, KLM, RTHA, Transavia and Facilicom contributed to the concept; after all, this is where their future employees will be trained. The building has an industrial look and feel and is designed like a real airport. Here the students can follow their training in a safe environment. The beautiful wood designs combined with concrete looks from our Eternal floor coverings form an excellent basis for this concept.

Project name	ROC Albeda Rotterdam The Hague Airportcollege
Location	Rotterdam
