

Axetris AG

Axetris is a leader in the development and manufacture of components for measuring and controlling gases and micro-technologies for focusing and guiding light. Since its founding in 1998, Axetris has focused on micro-optics and gas sensors. Construction work on the new cleanroom landscape at Axetris AG began in 2020. In January 2023, the workforce was able to move into the first large part of the converted, state-of-the-art clean room. The main goal of the new cleanroom landscape is to optimize manufacturing processes and increase production capacities. The use of high-quality materials from Forbo helps to maintain high safety standards. For example, 1000 square meters of "Colorex SD I EC" floors have already been laid - and further stages are to follow.

Installation by	Amstutz Dekoration
Building Contractor	Axetris AG
Date of completion	Jan. 2023
Photographer	Lüscher Fotografie
Architect	Architekturwerk Sarnen
