

Boy's bedroom, Zaleszany, Poland

The main element of this interior is furniture inspired by the industrial style, but with the use of contemporary materials. A spacious wardrobe, located right at the entrance. The main focus is the study and leisure zone. The chest of drawers, which in fact also functions as an RTV cabinet, also connects to the workplace, which is a desk with drawers. The bed, very simple in its form. The main assumption was its comfort, a large mattress and an upholstered graphite-colored headrest made of a pleasant fleshy fabric. Due to the raw color base of the surroundings, predominantly white, Amazaque veneer appears in the furniture. Thanks to its honey shade, it warms up a raw space. Veneer will also appear in the milled fillings of the handles, breaking the gray fronts of the wardrobe and the chest of drawers, which, like the bed chest, are made of Furniture Linoleum, in a delicate shade of gray. The material is very pleasant to the touch, resistant to fingerprints and bacteriostatic. It seems to be the perfect material for a child's room of all ages.
