

## Care Center Rubroek

For residents of a residential care center it is important that they feel at home as quickly as possible. The care vision and daily life of the residents are therefore the starting point for the design. The building radiates the hospitality of the organization. Residents live in a comfortable building with appropriate pride and dignity. Nature and daylight are important for a pleasant and healthy environment. Each floor has its own color and is chosen by the residents themselves. The warm neutral Marmoleum colors ensure peace and overview.
