

Clemenshospital, Münster

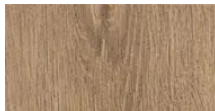

The Clemenshospital is characterized by medical, nursing and therapeutic competencies. 1200 employees take care of patients in the modern medical care center. The hospital has 400 beds and occupies a key position in the care of the city of Münster and the surrounding area. The Clemenshospital also scores points for safety: thanks to its own helicopter landing pad and fast freeway connections, the hospital can be reached quickly and easily even in an emergency. A reliable choice has also been made in terms of safety when it comes to the choice of flooring. Marmoleum Striato from Forbo proves to be a reliable, hygienic floor in the demanding daily routine of a clinic. This flooring proves to be particularly resistant to disinfectants and the daily signs of use. In the patients' rooms, the striped look of the floor positively contributes to the room effect. The Allura design flooring has been used in the recreation rooms and corridors. The quality of the design flooring guarantees long durability as well as easy cleaning and maintenance of the surfaces. This creates a soothing and appealing feel-good atmosphere for patients during their stay at Clemenshospital.
