

**Fi, Wrocław, Poland**

The Fi collection consists of round tables and small tables with a minimalist form and an original Furniture Linoleum Forbo finish. The shape of the cylinder makes perfect use of the properties of flexible material and together with the glued top it constitutes a visual unity. A simple table in this version looks fresh and very beautiful. The base of the Fi table is made of a cardboard sleeve and, together with the balanced bottom, forms the backbone for linoleum. The round top is a sandwich of materials: linoleum / plywood / hpl. The designer wanted an invisible connection between the leg and the top, which is why we placed a steel rod with a thread inside. The whole is screwed together with a screw hidden in the plywood bottom. This solution is aesthetic and allows easy disassembly of the furniture, which is important during transport. The table (optional) is equipped with feet that remedy a curved floor and protect it from scratching at the same time. The Fi collection won the main prize in the Furniture Linoleum competition organized by Forbo in the Best Design category.
