

## Five concept fitness equipment

Five-Concept develops innovative fitness equipment that is based on a holistic approach to flexibility and mobility. They were developed to improve flexibility, stability and posture by specifically training muscles and fascia in length and additionally mobilizing them. The special thing about these devices is that they expand the body's range of motion and compensate for imbalances that arise from one-sided stress or incorrect posture in everyday life. The fitness equipment is produced with a special focus on quality. The combination of the natural products wood, leather and furniture linoleum ensures a natural look and a warm feel. It is manufactured in Germany by the Schreinerei Innenausbau Wiedmann GmbH. With a wide range of services ranging from drywall and floor coverings to tailor-made furniture, the company offers individual solutions for private and commercial customers. Thanks to their many years of experience and their focus on modern materials and techniques, Innenausbau Wiedmann GmbH creates spaces and products that combine functionality and design. Due to the excellent material properties, Furniture Linoleum is ideal not only for furniture, but also for fitness equipment: the material feels pleasantly warm, which has a positive influence on comfort during training. It is particularly durable and scratch-resistant and can therefore withstand high loads. Furniture linoleum is naturally antistatic and hygienic, which makes cleaning fitness equipment easier. The production of fitness equipment is a real matter of the heart for the Five-konzept company. Furniture Linoleum is made from natural materials and therefore fits perfectly into the concept of sustainable, modern and high-quality fitness equipment.
