

Floriworld

The floor as an atmospheric connector in a colourful inner world FloriWorld, a brand new tourist attraction is an interactive and relaxing day out for lovers of flowers and plants. It offers a colorful and impressive total experience, in which the visitor actively participates and is immersed in an unforgettable experience. General Manager, Rick Pesik has every reason to feel proud. Ann Das, interior designer and responsible for the total 'look and feel' of FloriWorld, has added an extra dimension to the total experience through the use of different types of flooring: namely the connection between the different rooms and the literal basis on which one experiences each room individually. The great thing about the Forbo collections is that they are mutually attuned, have a large and diverse range of colours and designs, and have their own unique design possibilities through digital printing," says Ann. Almost all of our floors are represented, both sheet material as well as planks and tiles. From soft green and natural shades from our Marmoleum collection to bright Flotex colours, from digitally printed vinyl to Safestep non-slip vinyl because of its beautiful shimmer. From entrance to restaurant to skylounge. See for yourself, a beautiful total project of which the end result is awesome!
