

## Hotel Resident

Hotel Resident is situated in Harrachov, the centre of the winter and summer sports. This unique resort combines your home environment with the comfort of the hotel care. The functional entrance system Coral will welcome you by entrance. Architects use this high quality and durable entrance flooring Coral for the whole area of the entrance, reception, lobby and corridor. The brown tone of the Coral Brush matches perfectly with the used wood wall coverings and the historical photos. The big advantage of this entrance flooring system is, that it will stop the dirt and moisture already at the entrance, thus protecting the floor covering in the building and saving the time and costs for the maintenance.
