

**Jetbrains GmbH München**

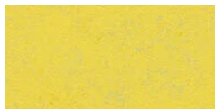

The 2019 newly constructed office building of the russian software developer JetBrains in Munich with around 3,500m<sup>2</sup> is an impressive property. The interior designer Sophie Green developed a design concept with strong lines and colours. Her goal was to incorporate the office's activities into the design. With the help of design elements, the theme of "digital data streams" was transferred into the interior. She attached great importance to sustainability and environmental compatibility. In the modern working environment, places of retreat offer the ideal balance. In addition to the cafeteria, a barista bar, several lounges and a fitness studio were built. The interplay of natural materials with extravagant shapes and colours creates a modern working environment with a futuristic design. Holistic, communicative and sustainable. The unusual design language is visible on the linoleum floor and accentuated with colour contrasting seams. In the entrance area, a yellow linoleum sheet shows the visitor the way to the reception counter and runs up to the ceiling as a colour contrast.

Project name	Jetbrains GmbH, München
Location	München, Deutschland
Date of completion	2019
Photographer	Olaf Becker, München
Interior Architect	Sophie Green, München
Installation by	Norkauer GmbH, München
