

KB Kookmin Bank

When it comes to installing floor coverings over Raised Access Flooring (RAF) panels in offices, quick and easy access is often the primary concern. However when it comes to future removal and replacement, traditional tackified products leave behind adhesive residue which can often damage the panels and means the removed flooring cannot be re-used or recycled as a result. As the future of flooring installation moves towards adhesive free solutions, the combination of Forbo's Allura Flex luxury vinyl tiles and the IOBAC MagTabs adhesive free installation system provided the perfect option for a fit-out project at KB Kookmin Bank's London office. Installed on raised metal access flooring super fast, cleanly and easily, the Allura LVT can be easily uplifted and reused or recycled at the end of its service life as there is no adhesive contamination. The access flooring will be left clean and ready for the next flooring installation, with no expensive remediation required.
