

Multi Functional Accomodation 'The Nest'

The new multifunctional accommodation Nest is an innovative, efficient, super durable and future-proof building. So for example, the three schools, the childcare and the handball club that are located in The Nest, make use of each others areas (like the gym). Unprecedented in the Netherlands, is an air ventilation system that utilizes - if necessary - naturally heated air. In the interior sustainability played an important role. Hence (but also because of her appearance and robustness) Marmoleum on the floor and Bulletin Board is chosen on the walls.
