

**NOVOZYMES A/S**

The Danish headquarter for the company Novozymes is furnished with consideration, quality and sustainability. But also with a special Danish concept: "Hygge!". Designed by Vilhelm Lauritzen Architect A/S. "The focus lies on a soft surface with a friendly aura and an ability to support and strengthen the rooms with the lights flowing through the windows and nature surrounding the outdoor areas. Moreover, the building owner has set the highest quality demands on sustainability and authenticity", explains the leading interior adviser and architect Cecilia Pettersson from Rebel Workspace and Vada Design. When you think of a pleasant atmosphere, Furniture Linoleum is a material with great authenticity and a mat discreet surface, which can blend calmly into the surroundings. The range of colors is chosen by a tone-in-tone concept, to make the furniture a part of the environment as well as emphasizes the other components of the interior. "The Furniture linoleum collection suits the house with fine quality factors. It lives up to the demands of the building owners about sustainability and eco friendliness. And not to forget it is easy to maintain", Cecilia Pettersson points out.
