

OCMW Sint-Job

The 118 residents of the old WZC Sint-Job switched this year to a brand new modern and comfortable residential care center. The architectural firm AMV from Wetteren chose to work with only 2 stories at the front, so that the size of the building is not too dominant. The alternation of open and closed spaces is also extended within the building. The open living spaces, corridors and seating areas were all given a homely atmosphere. The warm Allura Wood floor covering contributes to this homely atmosphere.
