

ONYX

The architect who carried out the ONYX project used Forbo Flooring Systems to customize the flooring. The product chosen is the flotex, a flocked textile flooring known for its acoustic properties, walking comfort, and ease of maintenance. The flotex vision range is composed of a wide variety of decorations, creating a trompe l'oeil effect and making each place unique. Thanks to this choice of flooring, ONYX has made its offices trendy and with a very realistic effect.
