

Pediatric Cancer Center

Hospital Sant Joan de Deu Pediatric Cancer Center is a pediatric hospital that specializes in the investigation, diagnosis and treatment of childhood cancer. The project remodels and expands an existing building, resulting in a total area of 14,000 m2, connected by an elevated walkway to the Hospital General Sant Joan de Deu. Inside, we needed to generate everyday atmospheres for patients and their families, which would help recovery and stay during the diagnosis and treatment process. The colours of Forbo Sphera Element allow us to create pleasant pediatric environments in a hospital setting.
