

Petkim Refinery cultural center

Petkim Petrokimya Holding A.Ş. started as a pioneer in the petrochemical industry in Turkey and is now a leading company. Specializing in petrochemical manufacturing, Petkim produces ethylene, polyethylene, polyvinyl chloride, polypropylene and other chemical building blocks for use in the manufacture of plastics, textiles, and other consumer and industrial products. The cultural center is located on the manufacturing plant of the Petkim petrochemical complex in Izmir. It will be used for corporate purposes, mainly as a conference center. The company chose Forbo's needlefelt flooring because of the design and acoustic values and also because the floor covering can withstand high traffic. All in all, the customer is convinced that this needlefelt floor offers a good price/performance value.
