

Saint-Malo Aquarium

The Saint-Malo Aquarium offers visitors a unique immersive experience that brings them closer to the marine world. For this project, 100% custom-made Flotex was installed, with a design created in partnership with the graphic design studio Polymorph. Inspired by waves and sand, this flooring creates a feeling of immersion at the foot of the aquariums, while enhancing the space in an original and captivating way. Thanks to its technical design, Flotex is highly resistant to moisture and heavy traffic, while retaining its bright colors and unique pattern. Its acoustic properties reduce ambient noise, creating a more pleasant atmosphere for visitors. Easy to clean and durable, it combines aesthetics and performance, perfectly suited to the requirements of a busy public place such as an aquarium.
