

School group Antoine de Ruffi

Quote Adrien Garcin of Tautem Architecture: "No less than 2,980 m² of Forbo's Marmoleum was used for the Antoine de Ruffi school group. Indeed, we chose to use this material throughout the building, with the exception of the exterior and the wet rooms (clean rooms, changing rooms, kitchen, etc.). Its inherent advantages make it a particularly suitable material for child-friendly facilities (flexible floor, easy maintenance, etc.). In addition this material enabled us to achieve the ambitious environmental objectives of this operation: the Mediterranean Sustainable Building label, silver level, and a pilot building for the new E+C- regulation, having reached E3C1 level."

Location	Marseille, France
General contractor	Euroméditerranée Ville de Marseille
Architect	Tautem Architecture (Adrian Garcin) / BMC2
Photographer	Luc Boegly
