FLOORING SYSTEMS

creating better environments

Stenden University of Applied Sciences

The main building of the NHL Stenden University was recently extended. Next to sustainability, the architect wanted to stimulate meetings and bringing students and teachers together. In the middle of the central hall you can climb, sit, lie and build with the cube-shaped elements. The long wooden stairs and the walls are partly overgrown with plants and on the floor you see a beautiful green lawn printed on Flotex Vision. Furthermore, BRTArchitecten has created various meeting places and has given it its own landscape. There is an area with a corn field, a tropical rainforest and a delta landscape. These landscapes are all also printed on Flotex Vision and thus form a beautiful eye-catcher in the room. In addition to Flotex Vision, Flotex Metro and Marmoleum Real were chosen. The renovation of the Stenden Hotel Management School was completed in December 2019. A beautiful new place of 4,500 m2 where Flotex has been chosen because of its the unique combination of design flexibility, acoustics and ease of cleaning.

Nom du projet	NHL Stenden Hogeschool
