

Sterequip

Sterequip provides health service organisations with a complete sterilisation solution for reprocessing reusable medical devices to ensure they comply with Australian regulations – a first of its kind. Healthcare environments are often exposed to a wide variety of spills from a wide range of chemicals and require a floor that could handle heavy traffic, and various chemicals, and is easy to clean. Forbo's Sphera homogeneous was selected by Hume Healthcare Architects for the first independent AS 4187 compliant outsourced Theatre Instrument Reprocessing facility in Australia. Step safety flooring was also used throughout the wet areas. The flooring design becomes a feature in an otherwise mundane workspace and guides the traffic and function.
