

The Eden Project

Having used Forbo Marmoleum flooring in the original build of the Core building, the Eden Project called upon the durable and sustainable floor covering once more to reinvigorate the recent refurbishment of the area. After years of constant use with around one million visitors a year, the Core building at the heart of Cornwall’s popular visitor attraction, the Eden Project, underwent a major transformation and a new exhibition, Invisible Worlds, was installed. Dr Jo Elworthy, Director of Interpretation at the Eden Project explained: "When we first built the Core in 2005, we wanted to create a sustainable space, so this meant using responsibly sourced materials. We approached Forbo as we wished to showcase environmentally-friendly, sustainable flooring made from natural materials – and Marmoleum seemed like the perfect fit on all levels. As the existing Marmoleum floors had fared so well over the years, we went back to Forbo when we were looking to refresh the building. Again, we needed a floor covering that was made from renewable raw materials, PVC-free, low emitting and carbon neutral, yet would be able to withstand the heavy footfall of visitors that we get each year."

Project name	The Eden project
