

The Redden Centre Student Hub

The Redden Centre Student Hub emerged as the first of many stages of the St Aloysius College Masterplan. What was once a noisy concrete anti-space has been transformed into a vibrant, inviting space for students to gather and connect, thanks to acoustic treatments and mobile furniture. It is now a flexible all-weather space for breakout, learning and assemblies, while retaining its connection to the outdoor play spaces beyond. Flotex was chosen due to the harsh environment and ability to last year after year.
