

Toy-shop Bambule

The toy shop is a play room which is connected with the Lego® gallery. It was necessary to choose for the floor covering a material, which is warm and comfortable as carpet and will be maintained as a smooth floor too. The architect used different color combinations of Flotex Flocked Flooring in sheet to separate the individual game zones. The high durability, comfort and hygienic standards of the Flotex floor covering fully satisfy the children needs, as they play and build on the floor.

Project name	Toy-shop Bambule
