

USM Haller & Kitos Tische

The modular furniture system of the Swiss family-owned company USM U. Schärer Söhne AG is known and appreciated around the world as a timeless design classic. Founded in 1885 as a hardware store and locksmith's shop in Münsingen near Bern, USM is now a successful international industrial company. Production continues to be carried out exclusively in Münsingen, with unchanged high quality standards. The modular furniture system USM Haller, developed by architect Fritz Haller and engineer Paul Schärer Jr., has long since spread from its original use in modern office environments to many other areas of life. Over the decades, other product lines have been added, such as the USM Haller table and the height-adjustable USM Kitos table. The high-quality and durable USM tables are available in diverse designs with a variety of surfaces. The linoleum table surfaces come exclusively from the production of Forbo Flooring Systems. With their pleasant feel, light elasticity and warm texture, they not only contribute to a pleasant living and working environment, but also to the success story of USM's design tables.
