

Vinci Construction's head office

Vinci Construction's new head office is located in the P.A.C.A. region near Nice. To cover its floors, the construction company opted for Forbo Flooring. For the office areas, Vinci Construction installed acoustic Flotex in planks format. This acoustic option promotes concentration and a calm working environment. Moreover, the planks can be used to create original, personalised layouts. In some areas, customisation was highlighted, notably with Flotex lab and Eternal lab. Sandy beach decorations were created for the occasion and printed on Flotex in our French factory in Château-Renault. In the kitchen area, Marmoleum was installed for its traffic resistance and environmental benefits. Its colour gives the room a warm, pleasant feel. In all, more than 10,000 m² of Forbo Flooring were installed in Vinci Construction's new premises.
