

Alexander Monro breastcancerhospital

The desire of General Manager Jan van Bodegom, the initiator of this particular hospital, was released. The desire of the surgeon was to provide fully customized and personalized care. In addition, the interior has a very important role. Each room of this 3,000-square-foot project is designed to give the patients a comfortable and safe feeling. On the floor Allura Wood and durable, bacteriostatic Marmoleum (Unexpected Nature) is to be found. These are materials which, like the smooth furniture, is easy to clean.
