

Botnia House

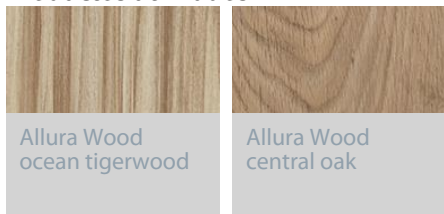

In the center of Franeker, a beautiful new residential complex for seniors is situated. In the Botnia House, residents live in a beautiful new home with modern amenities. The interior designs is done by Frank van Dijk;

"The space in which we receive care or grant has a noticeable effect on the way we experience this concern. The interior has an impact on well-being and reduction of stress, of residents (dementia) care institutions and users. I even believe that it makes a positive contribution to the health recovery. The Botnia house is decorated with the allure of a care hotel and thematically with recognitions from the local area. In addition to the enormous influence of good lighting, the floor is a great influence on the perception of security, confidence and hygiene and color.

I can meet the desired requirements of the clients with today's collection of Forbo'
