

**(Education) Carnegie College (formerly Lauder College)**

When it came to choosing the flooring required for its new state-of-the-art sustainable building at Carnegie College in Fife, the project team knew that Forbo's Marmoleum® was the way to go. In 2003 Carnegie College began a fundraising campaign to support the development of a sustainable building with the aim of introducing staff, students and visitors to working in an environmentally friendly way. This was called the 'EcoSpace Project'.
