

## Grow Medical

Grow Medical a new family orientated GP clinic in Sherwood Brisbane selected Forbo Flotex Tile and Sphera as their floorcoverings of choice. A holistic approach to health and excellence in care is the focus of the clinic and reason why only products proven to benefit the interior space and human health were sourced. Flotex is well known for providing healthier indoor air quality for patients and staff as dirt and allergens are easily removed by vacuuming. Flotex releases 30% more dirt during cleaning than conventional carpet and has the British Asthma and Allergy Foundation seal of approval.

Sphera Energetic homogeneous vinyl flooring was used in the treatment rooms for its functional properties while challenging traditional flooring design. Sphera combines solid colour with colourful accent chips that create an integrated room design, linking joinery, walls, floors and furnishing. Additionally, Sphera is produced 100% phthalate free and the new surface technology allows Sphera to resist common chemicals, scratches and stains, Long-term durability and ease of maintenance with infection control were also key factors in the selection of Flotex and Sphera. Both are proven to inhibit the growth of MRSA and other antibiotic-resistant bacteria. Silently protecting staff and patients through the use flooring engineered for health is just one example of the added level of care provided by Grow medical.

Flotex and Sphera are manufactured from 100% renewable energy sources in SA8000 certified production facilities. SA8000 is an auditable certification standard based on the principles of international human rights norms, regarding child labour, forced labour, safety and remuneration.
