

This new style of the Kijkshop opened in the heart of the city Tilburg, at the end of April 2013 with a Marmoleum Concrete floor. "Especially in a relatively limited retail space the focus must lie on the range," said Mark van Zutphen (manager construction & technique). "We wanted to emphasize that with the floor. Hence, we have chosen a covered shade (Purple Haze, ed.) Marmoleum Concrete. With its matte, dark concrete structure design it gives extra shine to the brightly colored shop furniture, the glass in the windows and screens. The fine floor pattern causes less noticeable dirt, so it always appears to be clean. Cleaning is also easy. And the material can last for years".
