

## 实验室-德国-Robert Koch Institut

The tasks of the Robert Koch Institute include the monitoring of emerging diseases and risk factors in the general population as well as the provision of scientific research. This allows appropriate measures to protect the general public health to be taken in a rapid and effective way. These tasks make the RKI the central institution and the coordination centre for the Federal Ministry for Health for applied and basic research in the areas of

- infectious diseases, including infection epidemiology
- epidemiology of non-transmissible diseases.
