

1. Sourcing responsible ingredients

Increasing weight of raw materials based on recycled or renewable feedstock*

Increasing the number EC1+ certified products

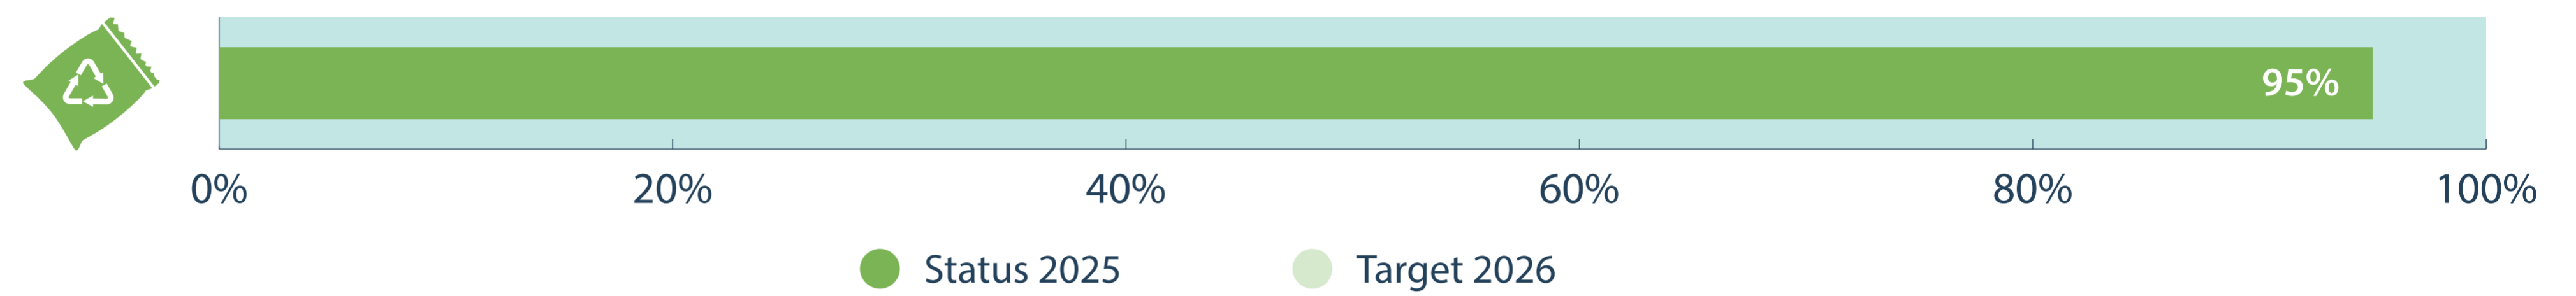

* Materials are defined in ERP system (recycled/renewable) and are contained in a broad range of Eurocol's product portfolio (levelling compounds, adhesives, coatings, etc)

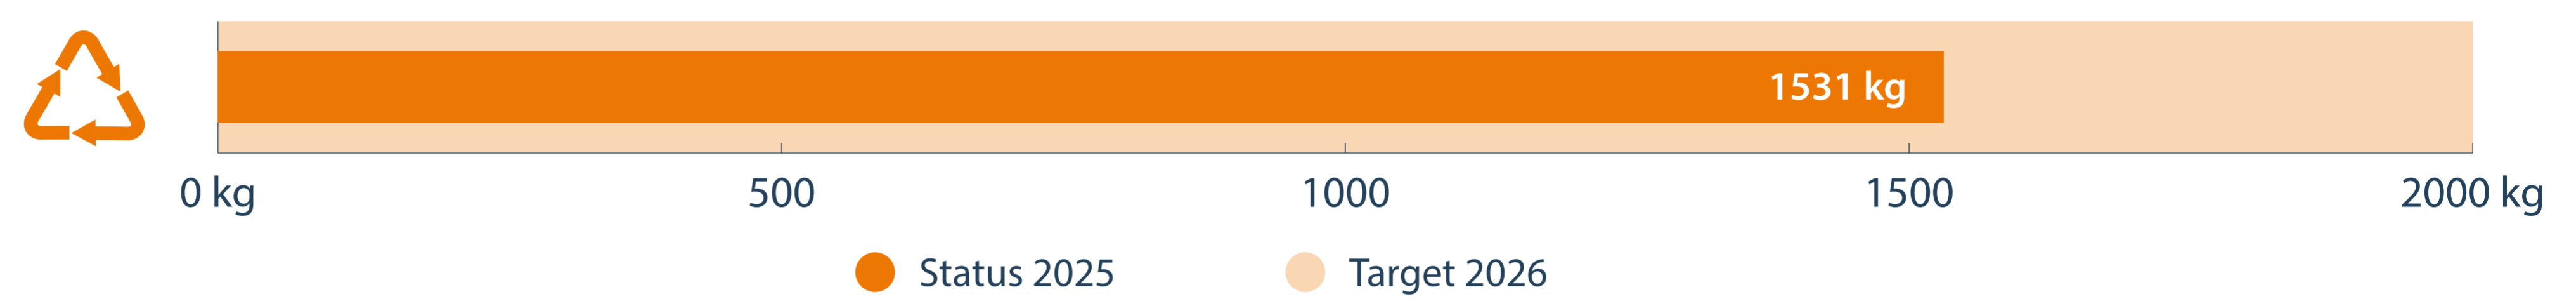

2. Responsible use of resources & become a zero-waste company

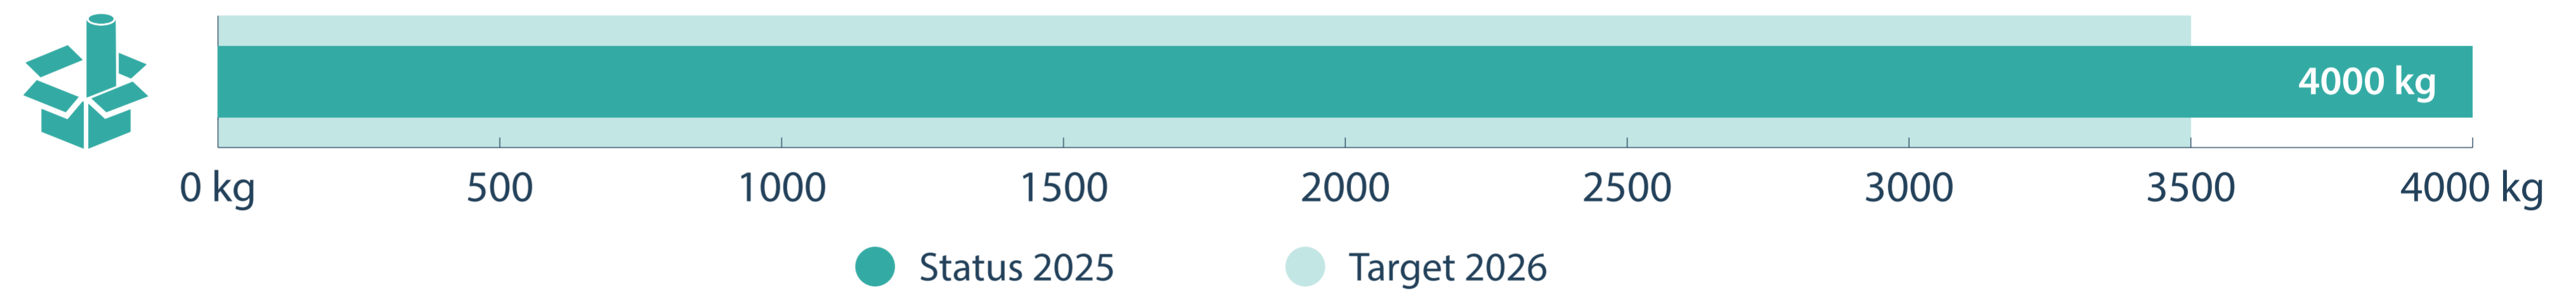

Increasing recycled content in plastic packaging

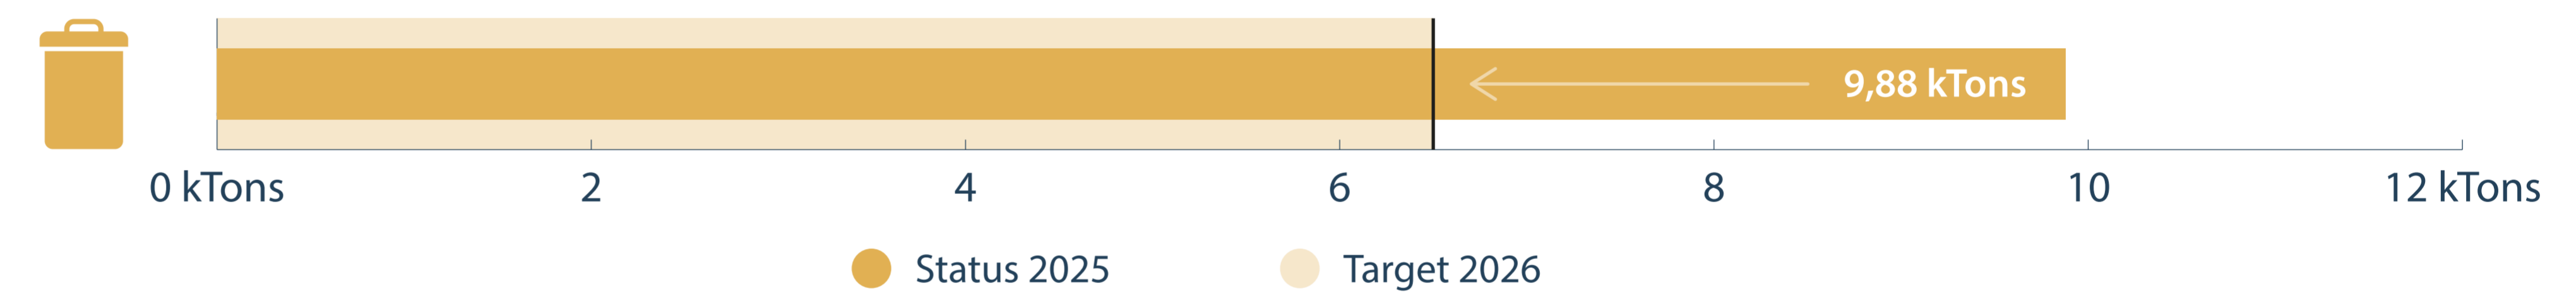

Recycled through takeback

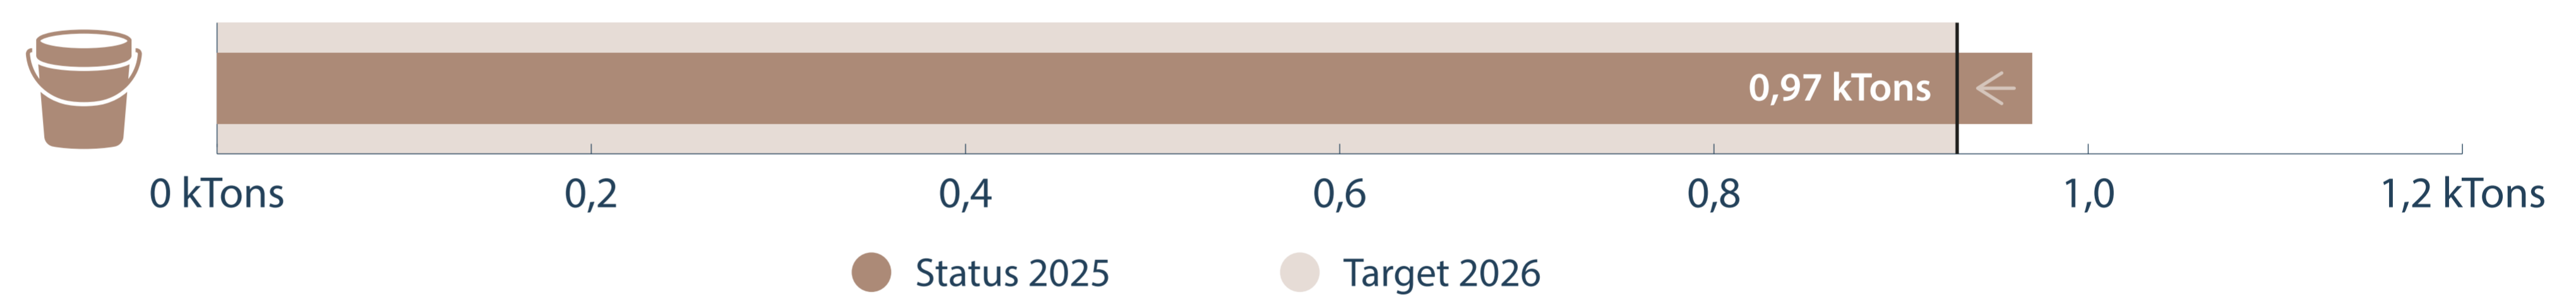

Preventing packaging use by switching to large scale packaging

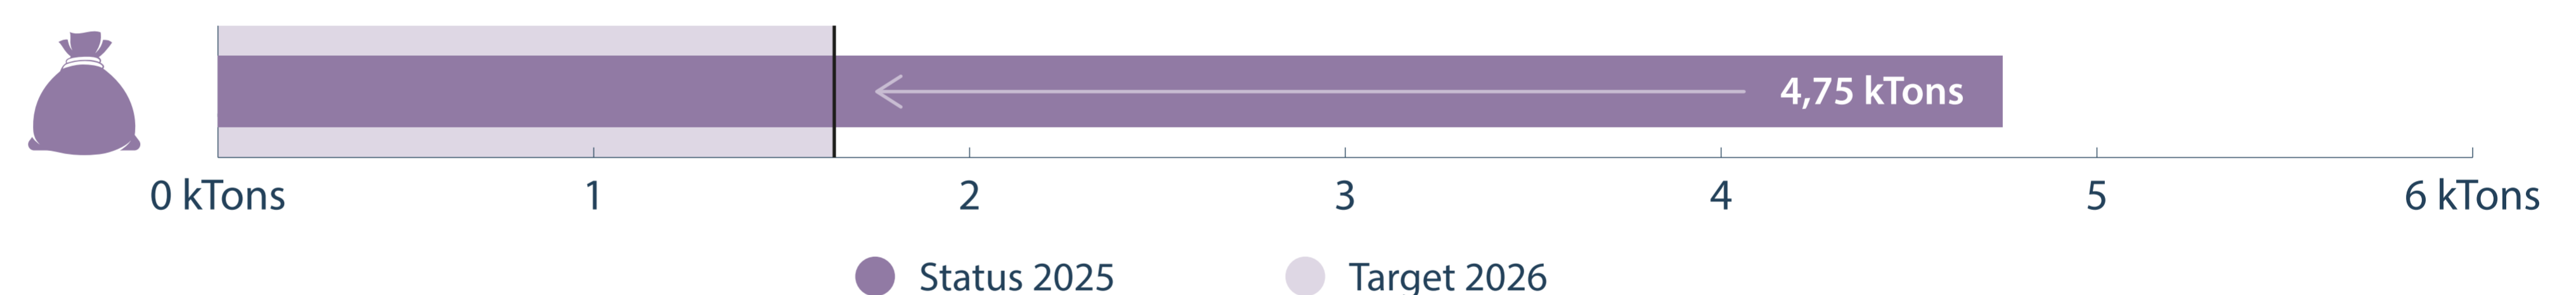

Reducing amount of Total waste created (incl. metal, paper, wood)

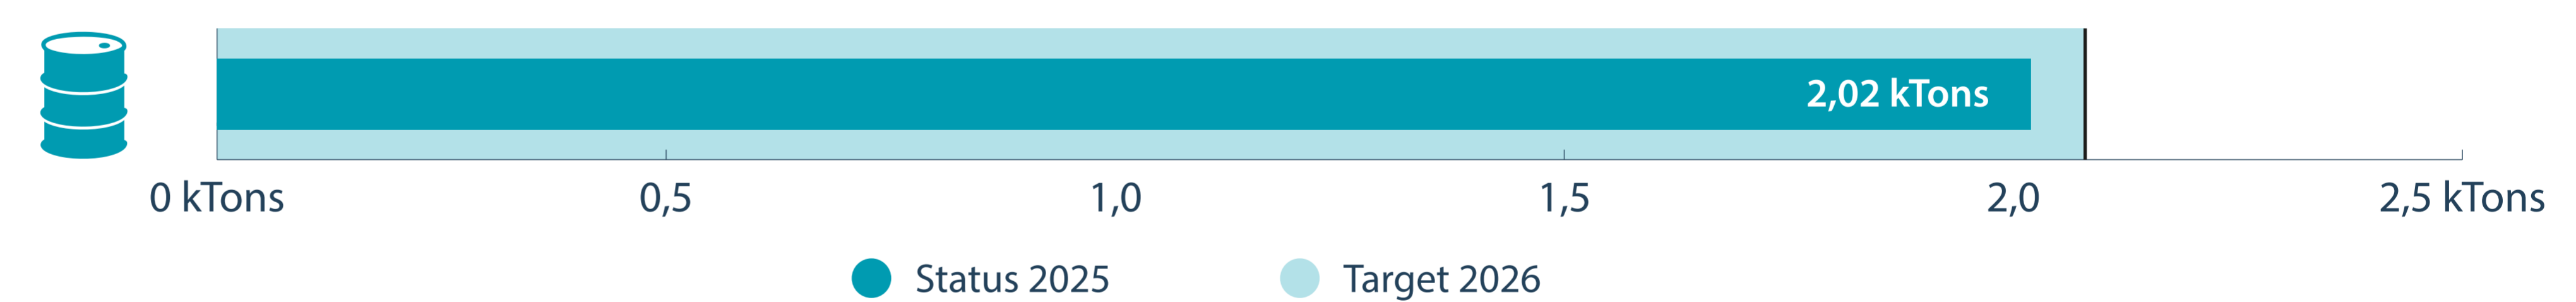

Reducing amount of Sludge created

Reducing amount of Powder waste created

Reducing amount of Industrial waste created*

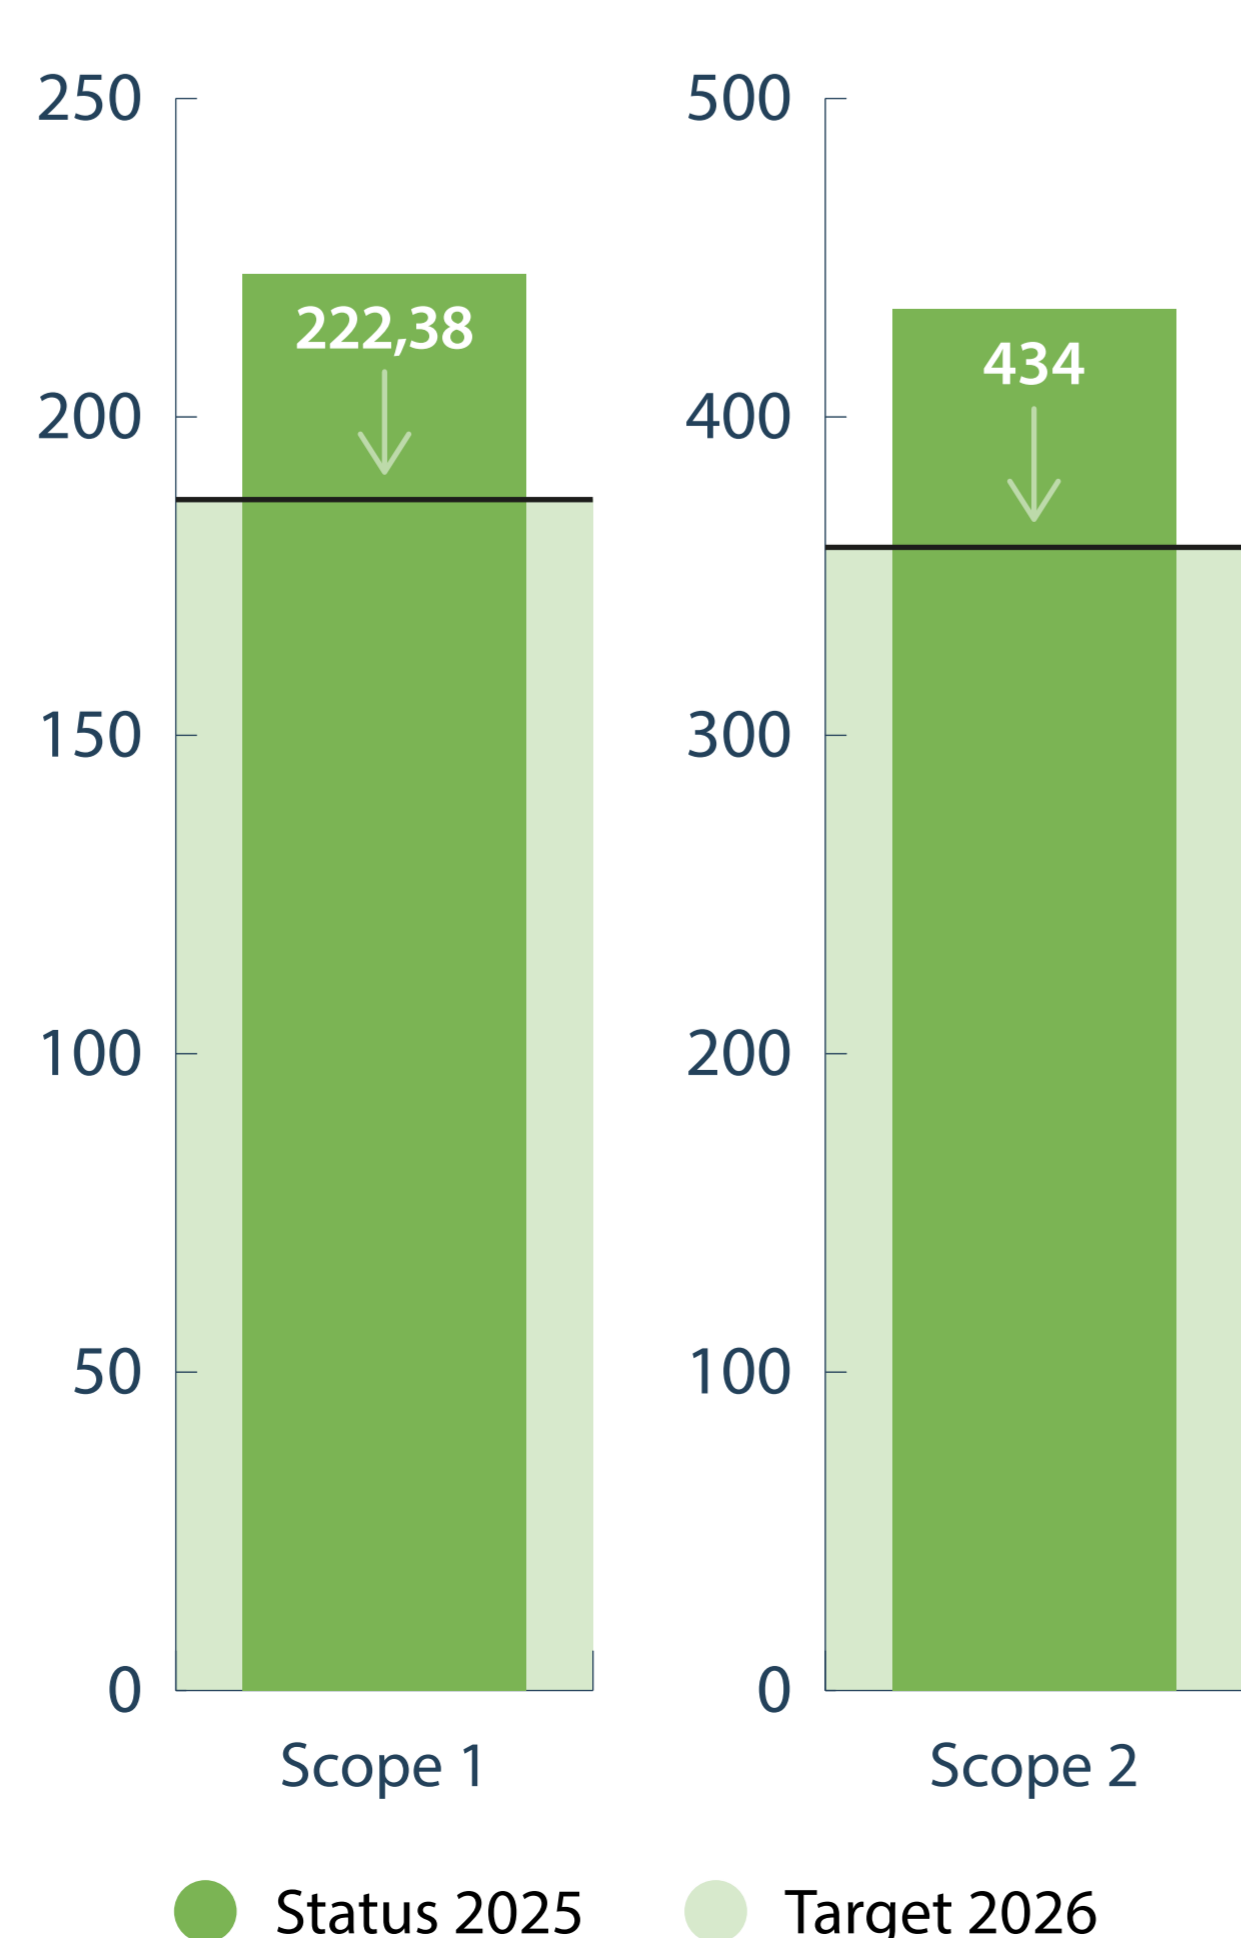

* Residual waste, no overlap with Sludge and Powder waste, but included in Total waste

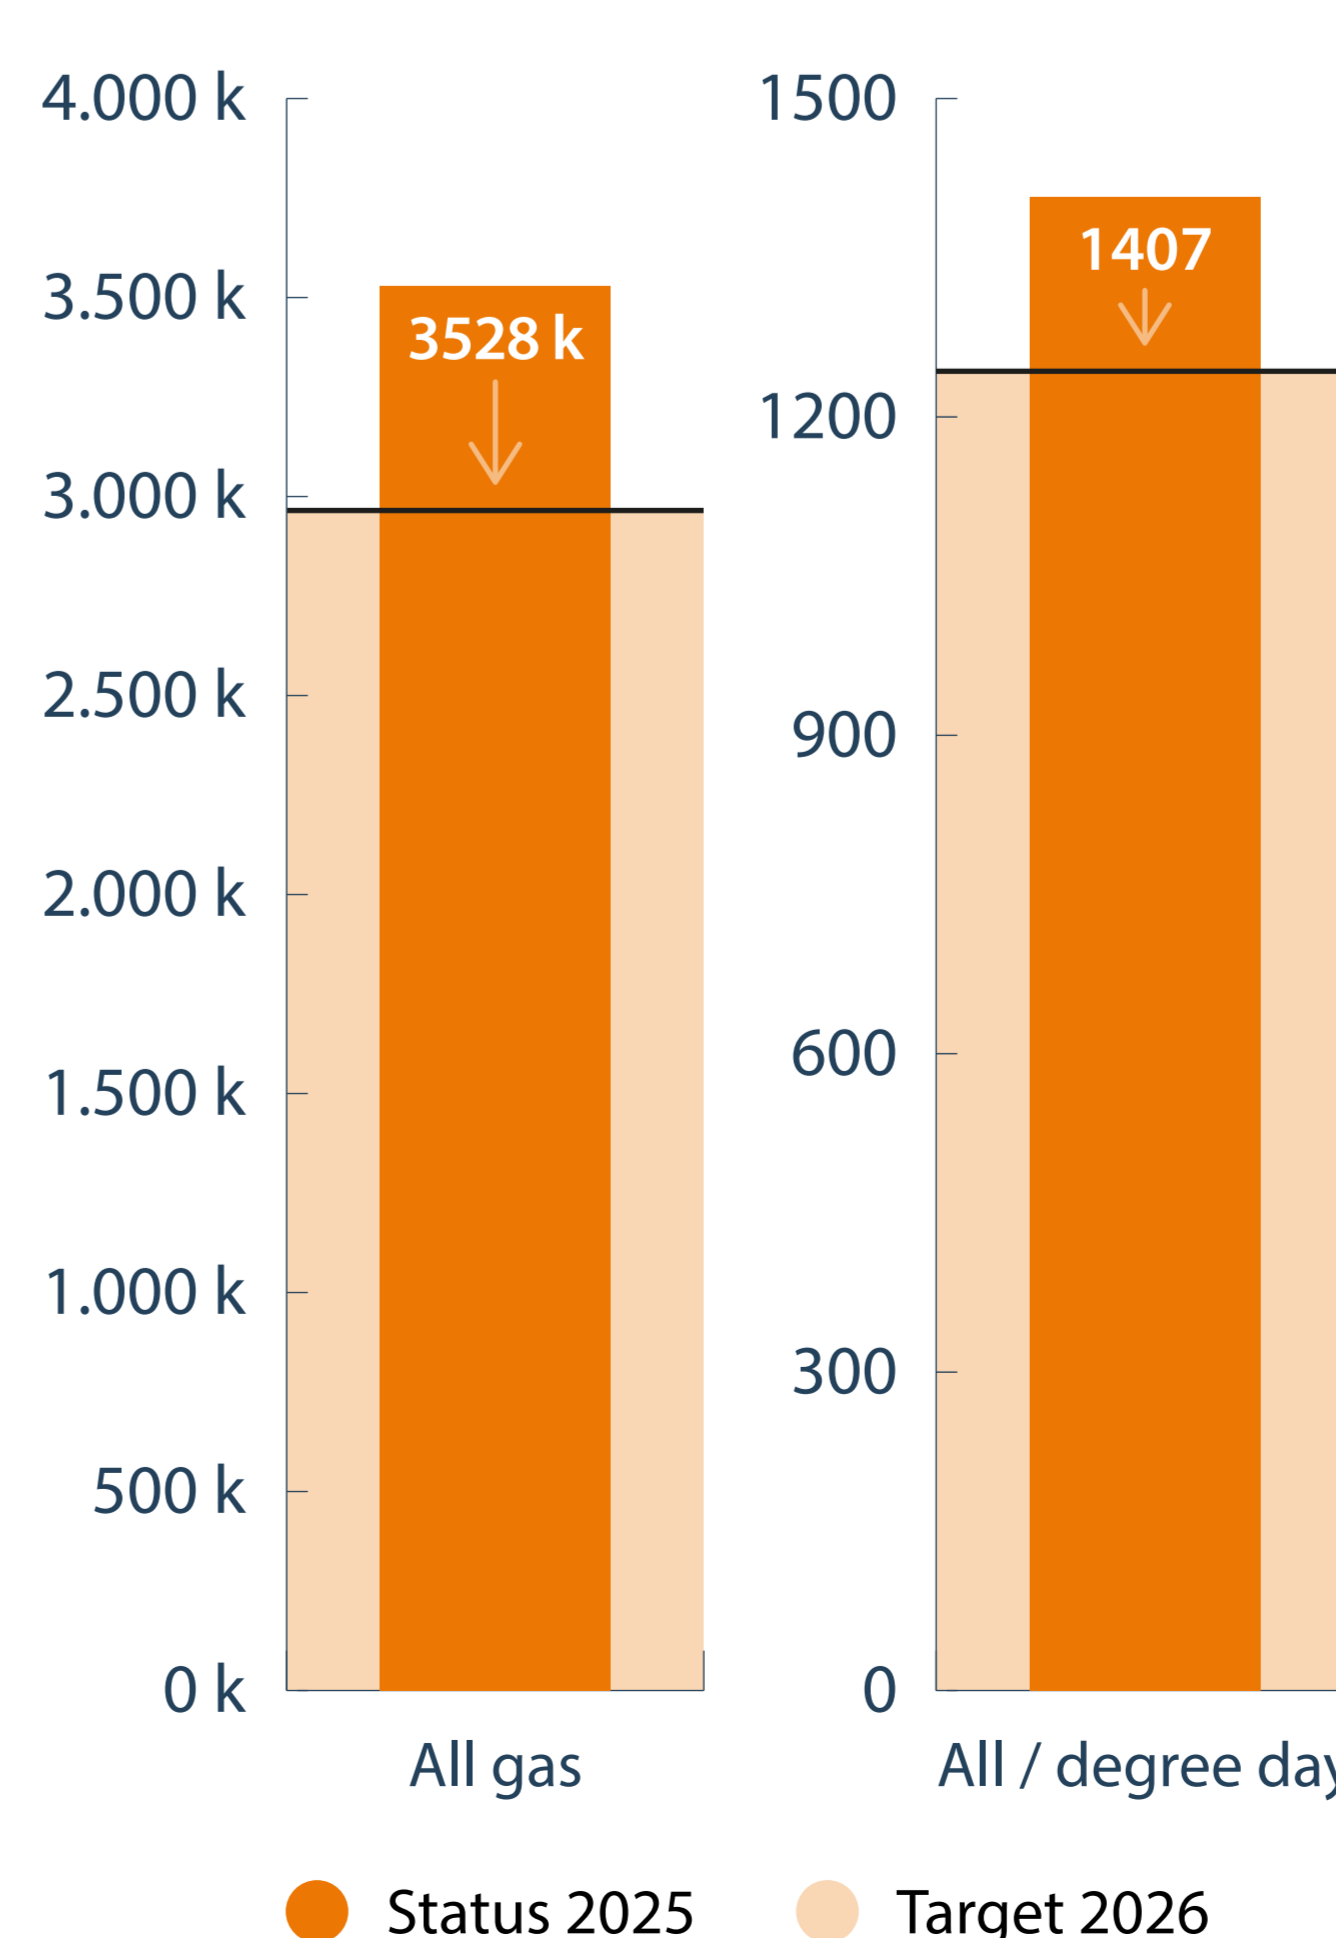

3. Decarbonize our value chain

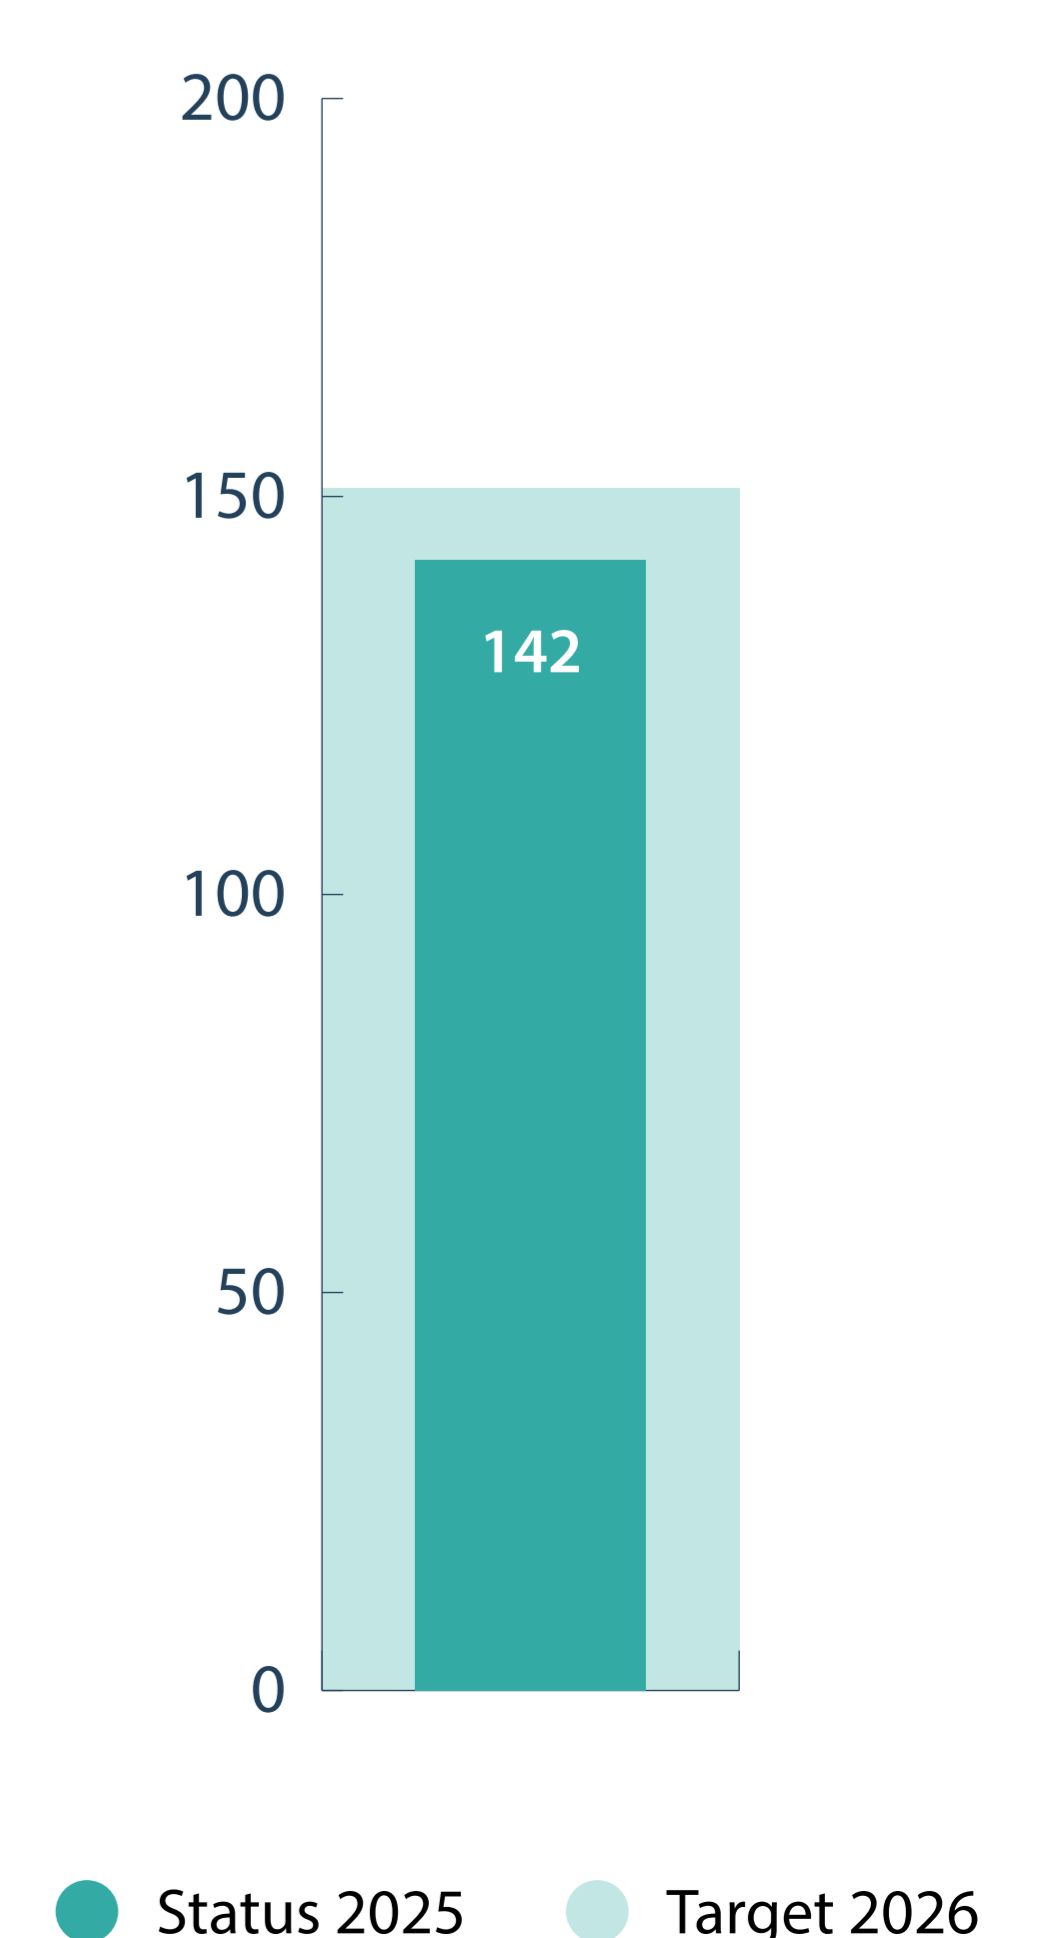

Reducing total Greenhouse Gas (GHG) emissions (kg CO₂)*

Reducing use of natural gas for heating (MJ and/or MJ/degree days)

Decreasing usage of electricity intensity (MJ/Ton production)

* Scope 1: combustion on site (gas), Scope 2: emissions to related to purchased electricity/heating
