

A close-up photograph of artificial turf installation. A central strip of green artificial grass is being laid over a dark, textured underlay. The strip is held in place by a series of green, ribbed straps or staples that run parallel to its length. The surrounding area is already covered with the same green artificial grass, showing a dense, textured appearance.

FORBO EUROCOL ADHESIVES, OFFICIALLY TESTED AND CERTIFIED

The Governing Bodies for Football, Rugby, Hockey and other international committees specify stringent tests and trials to ensure the same high quality worldwide. All of the Forbo Eurocol Adhesive Systems are proving to have an ample performance reserve and exceed regularly the most ambitious requirements set for the joint formation of artificial turf.

Forbo Eurocol Germanys' unique quality is tested and certified by the testing department of "ISA Sport", the independent Institute for Sports Facilities, internationally accredited by most of the major Sports Associations.

ARTIFICIAL TURF INSTALLATION

149 EUROMIX TURF
Two-component PU-based
artificial turf adhesive

160 EUROMIX TURF PRO
Two-component PU-based
artificial turf adhesive
 - up to 20 % less consumption
 - for bad weather conditions

842 EUROTAP F
Seam Tape for
football fields

843 EUROTAP T
 - adhesion on both sides is possible, for overcrossing installation of tape (areas of game-line marking)

849 EUROTAP U
Seam Tape universal
 - very high tensile strength
 - adhesive can be applied on both sides

SODAFLEX 40 FC by Eurocol
One-component adhesive
 - ready to use

➤ Roll out the covering

➤ Joint edges to be cut

HIGH TECH AND **MANUAL SKILLS**

Forbo Eurocol advanced adhesive system is based on the latest generation of polyurethane adhesives and extremely tough, ultra-thin strips of special non-woven textile.

Thanks to ongoing further development it holds an unchallenged position as the state-of-the-art technology, and is the preferred choice of the majority of artificial turf manufacturers and installation firms. Apart from its high quality

and resistance to weather and abrasion, it also offers sufficient flexibility for making any corrections or precise adjustments that may still be necessary during processing. All in all this offers the best possible basis for achieving the desired results.

➤ Pull the seam tape through adhesive machine

➤ Align the turf with the seam tape

➤ Straighten the turf for optimal optic and performance

➤ Final result
