

We believe in creating better environments

From how they're made to how they perform, we make outstanding floors that are truly sustainable.

That's because our floors are good for people, good for buildings and good for the environment.

So, from the building they're in to the world outside, we're helping our customers work, live and relax in better environments.

Forbo Flooring Systems

It's about the things you can't see

A Forbo floor is always beautiful and stylish to look at. A floor that's comfortable to live, work and play on.

But looks aren't everything; often, it's the things you can't see that really matter.

We believe true sustainability is about creating links of shared responsibilities and values between all stakeholders.

From how it's made, our footprint...

From how we run our factories to how we choose our ingredients, the way we make our floors is a big part of how we meet our mission to create better environments.

For example:

We use **Life Cycle Assessment**, an open and transparent methodology, to measure our products' complete environmental performance. We're committed to **Green Design** principles including **BIM**: to increasing efficiency, reducing the use of virgin raw materials and always searching for the most environmentally appropriate solution.

We reduce, reuse, recycle and renew. For example, we collect and recycle installation off-cuts and help repurpose end-of-life waste into some of our new products. Our save a sample scheme encourages customers to return samples to us once they have served their purpose. This allows the samples to be re-used or recycled rather than thrown in the bin, and ultimately reduces the amount of material going to landfill.

We make our flooring in clean, efficient factories, powered by **100% renewable electricity** (carpet tiles are produced with 100% renewable **energy**). And we make sure they're close to our designers in Europe – so that those who make and those who create can work side by side.

...to how it performs, your footsteps...

We include the whole life of a floor when we think about its sustainability performance. Which means we make sure our floors start performing from the moment they're fitted.

For example:

We understand that floors have different roles to play within a building. Because we make a wide range of flooring, we'll start by recommending the **best floor for the job**, and then always make sure it's as sustainable as possible.

We're always finding ways to provide you with the **lowest cost of ownership** for our floors. They're always easy to install and require less maintenance, using **less cleaning chemicals**, throughout their life.

Which, by the way, will be a long and happy one, saving money and reducing waste.

Simply browse through this brochure to discover the things you can't see that make Forbo's floors truly sustainable.

There's a craft to making really good Marmoleum. Fortunately, we've had over 100 years' experience in getting it just right. Marmoleum is made from an average of **97% natural raw materials, 72% of which are renewable** and will grow back within ten years.

At the heart of Marmoleum is the flax plant from which we derive the key ingredient, linseed oil.

The use of natural, renewable materials has led to Marmoleum (2.5mm) being independently EPD confirmed as a CO₂ neutral floor covering (cradle to gate).

The new Marmoleum Cocoa range goes one step further by adding a seventh natural ingredient, upcycled cocoa shells from a Dutch chocolate producer.

Marmoleum is also made with **recycled content** to reduce the need for virgin raw material.

At the end of its long life, Marmoleum is **100% biodegradable** under controlled conditions.

your footsteps

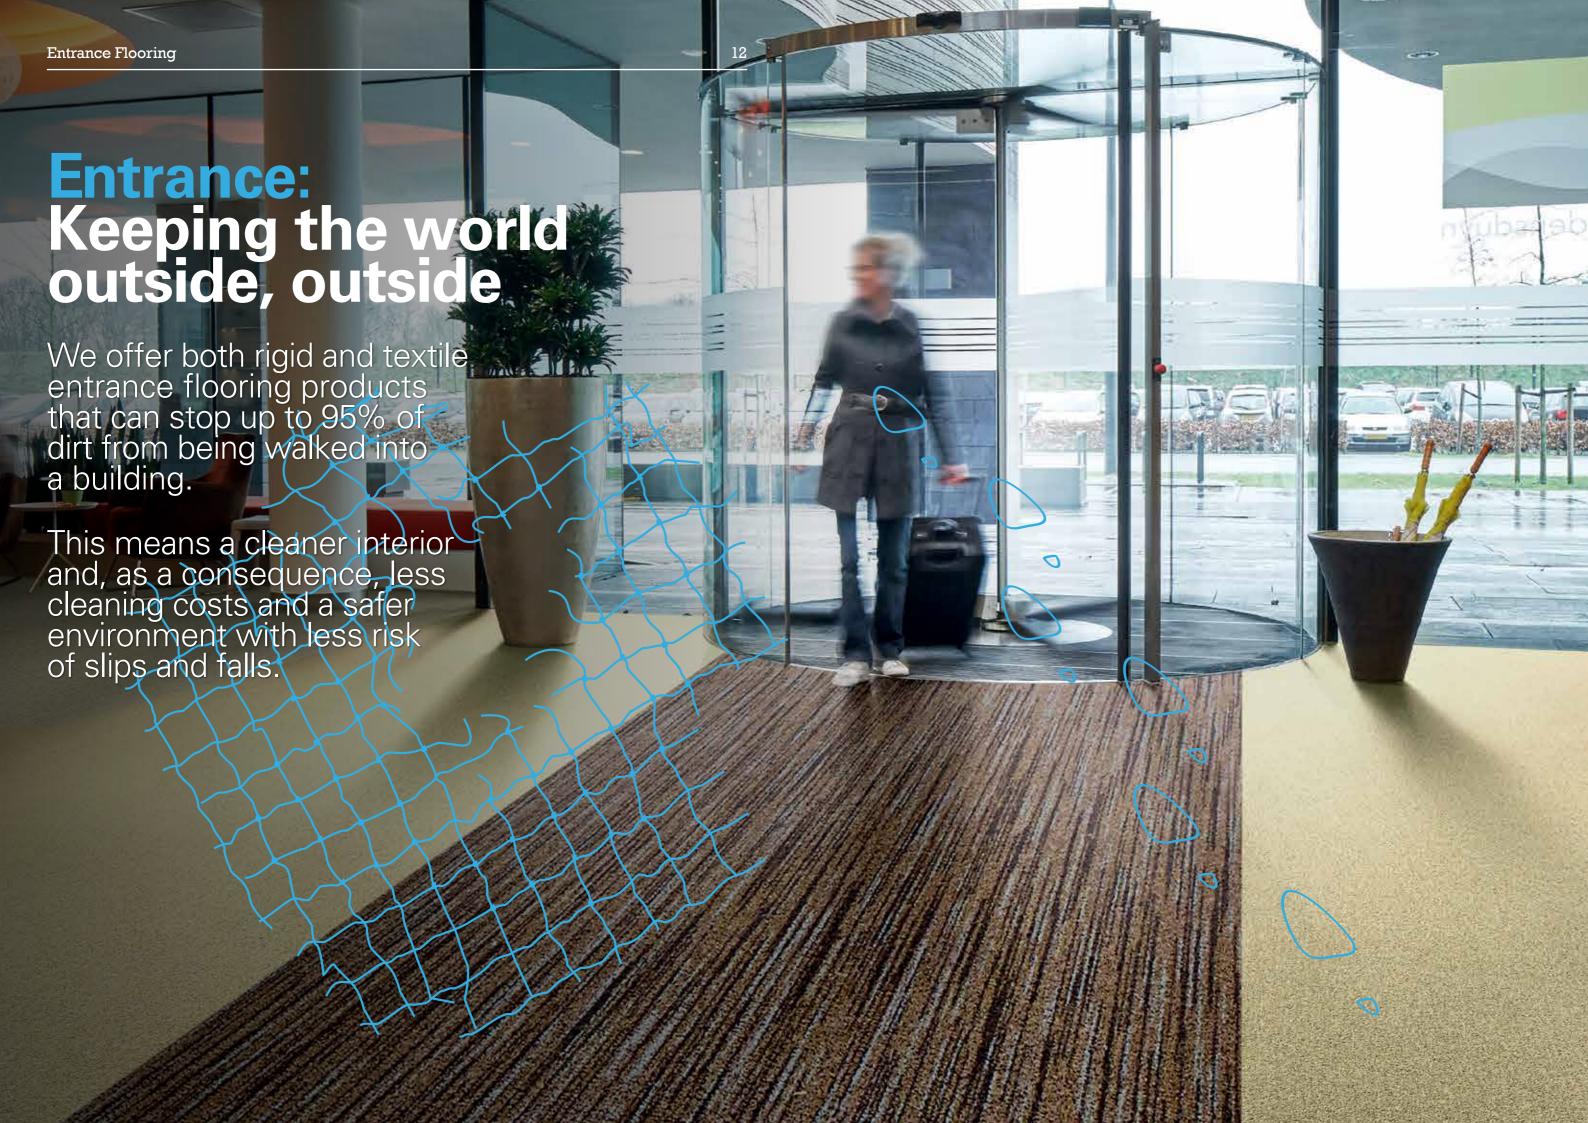

This floor performs well from the minute it's installed, but it also becomes **stronger over time**, making it more and more durable.

We finish Marmoleum with **Topshield2**, which, together with its natural bacteriostatic properties means the floor is hygienic and needs less cleaning with less harmful chemicals.

Approved by **Allergy UK** and with TVOC's 30 times lower than the European norm, you can relax knowing that Marmoleum contributes to a healthier indoor environment.

We **recycle installation off-cuts** into new Marmoleum at our plants in Scotland and the Netherlands.

And because it lasts for so long and is so easy to clean, Marmoleum has a very low cost of ownership.

From old carpet fluff to abandoned fishing nets, many of our Coral collections are made from ECONYL® – a high quality yarn made from **100% regenerated polyamide**.

The primary backing of Coral Welcome is made from **recycled plastic PET bottles**.

We make Coral in a factory that runs entirely on green electricity and sends virtually zero waste to landfill and 100% of our aluminium, steel and rubber waste from our Nuway production is recycled.

And for those customers wanting a 'natural' entrance system, we now offer Nuway Tuftiguard with Bamboo scraper bars. Bamboo is a sustainable species of grass and one of the fastest growing plants on earth.

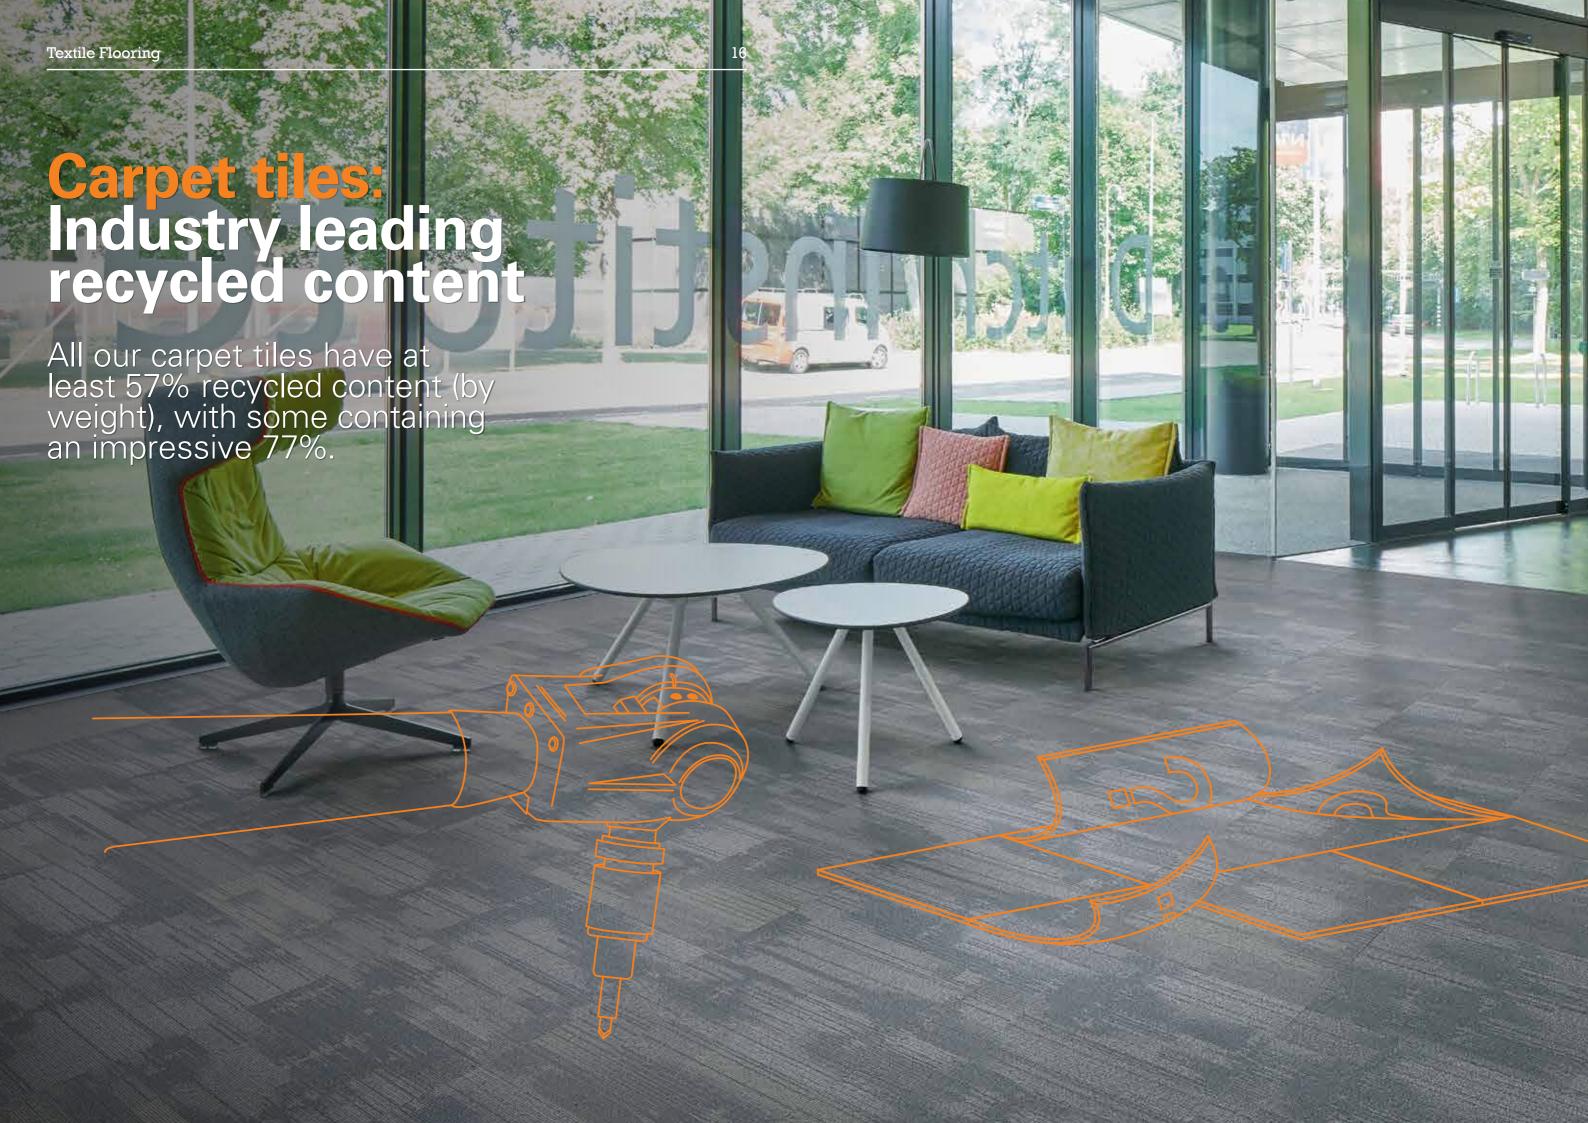

your footsteps

We offer different types of entrance flooring; together they stop up to 95% of dirt being walked into your building:

- External rigid matting scrapes coarse dirt from shoes
- Interior primary matting with scraper yarns removes moisture and finer dirt particles
- Interior secondary matting removes the final traces of moisture to prevent slips

Together, these can **reduce your cleaning bills by up to 65**% thus saving you money, energy and chemical cleaners. They also reduce your environmental impact.

In addition, our Nuway Tuftiguard rigid entrance mats are reversible, so you can **double their lifespan** by simply turning them over.

By challenging the way tufted carpet tiles are made, our UK-produced Tessera tiles now boast **at least 57% recycled content** and all Teserra products meet the indoor air quality requirements of CDPH Standard Method V1.2, widely known as CA Section 01350.

Investment in an extruder has reduced our bitumen usage by 56% and enabled us to increase the levels of our recycled filler by 30%.

We're reducing the amount of virgin materials we use. For example, instead of throwing away yarn ends, we rewind them and tuft them into our Tessera carpet tiles. We even have carpet tiles made with up to **100% ECONYL® regenerated yarn.**

All tufted Tessera carpet tiles are manufactured using 100% renewable energy (electricity & biogas).

your footsteps

Our carpet tiles are quick and easy to clean using a system called **Dry Fusion**, which uses heat, a little water and natural, organic cleaners. So you can use less water and fewer chemicals without compromising the appearance.

Following Green Design principles, our innovative random-lay carpet tiles **reduce fitting waste to less than 2%**.

And any Tessera fitting waste can be collected **to avoid landfill.**

We work with recycling companies to help customers clean, reuse and recycle old carpet tiles in the UK.

Our vinyl ranges contain **up to 70% recycled content** in their backing.

We produce all our vinyl in Europe where it meets the highest possible current and future REACH compliance standards for chemical content.

Of all the electricity we buy, **100% comes from renewable sources**. This means our vinyl production sites are part of an effective environmental management system and achieve ISO 14001 certification.

We use the highest quality raw materials and all of our vinyl ranges vinyl ranges are **phthalate free** as we're always looking for ways to make things better.

Our ground breaking new **Fast Fit adhesive free flooring solutions** help reduce the amounts of material and energy used for a flooring installation.

your footsteps

We use smart material constructions and durable finishes on our vinyl. A micro-embossing technology reduces the need for chemical cleaning and increases the floor's lifespan.

Through our **Back to the Floor scheme**, we can collect installation off-cuts from our vinyl floors floors to avoid landfill.

Our Allura Flex vinyl tiles are adhered using tackifier so they can simply be **taken up and recycled at the end of their life**.

Our collection of **Fast Fit products**, including sheet, tile and plank options, can be effortlessly removed at the end of its useful service life and recycled avoiding landfill as there is no adhesive residue stuck to the back of the material.

We reduce the resource use of our hybrid flooring range, Flotex, wherever possible and through packaging re-design, we've cut cardboard use by 50 tonnes per year.

The unique design of Flotex means it releases twice as many allergens on cleaning than standard carpet and meets the requirements of Californian Specification section 01350 which relates to **air quality**.

Flotex tiles and planks contain up to **52% recycled content** and, as Flotex Colour ranges have no pattern repeats, installation is easier and wastage reduced.

your footsteps

Our Flotex flooring is **100% waterproof**, which means you just need water and standard cleaning materials, (and no chemicals) for an effective clean, and you can also easily steam clean Flotex when hygiene standards demand it.

Recent research by Cleaning Research International has shown that **the cleanability and durability of flocked floor coverings are unsurpassed** amongst textile floor coverings which, along with the allergy benefits makes them particularly suited to high-traffic spaces.

Flotex is proven to have a positive effect on the lives of allergy sufferers and is the only textile floor covering to receive the prestigious **Allergy UK Seal of Approval**™*

Phthalate free, slip resistant and offering up to 22 dB impact noise reduction, Flotex is a reassuringly safe and sound flooring solution.

Through our Back to the Floor scheme, we can collect clean Flotex installation off-cuts and recycle them at our plant in Ripley, Derbyshire.

Green certification

We use several transparent independent third party certification systems for our flooring products. We're also keen to include our products in the building rating systems for a sustainable environment.

It's good for Forbo because it helps us share our sustainability story and spot opportunities to improve.

And it's good for you because it shows that other environmental experts agree that our floors are among the most sustainable and high performance available.

Green information

We provide environmental data sheets for our products which are available online. Importantly, if a particular product doesn't meet a relevant standard or criteria, this is noted on the sheets. Please visit www.forbo-flooring.co.uk/cbedownloads to download the data sheets.

We also provide high quality electronic information such as BIM models with all the relevant and up-to-date information included. Please visit www.forbo-flooring.co.uk/BIM to find out more.

Social accountability

As well as reducing our impact on the planet, we're also working on caring for the people that touch our business, from employees to suppliers. That's why all our UK manufacturing facilities and most of our sites in Europe are certified to OHSAS 18001 – Occupational Health and Safety and SA8000[®]. The SA8000 Standard, established by SAI and **one of the world's preeminent social standards**, is a tool for implementing international labour standards to protect workers along each step of the supply chain.

In addition, Forbo is the first flooring company in the UK to achieve BES 6002, the Ethical Labour Sourcing Standard.

Creating Better Environments

We'll only keep Creating Better Environments if we keep improving and innovating our products and services.

So, while we're proud of our existing certification, we'll always be working to achieve better results – for you and the environment.

A selection of our International environmental awards:

Floor Coverings

Committed To The Health Of One

As our floors are part of the indoor environment in which people live, meet and work, it is our mission to design and offer products that contribute in a positive way to the health and comfort of the individual. "Committed to the health of one" introduces a focus in our commitment to sustainability that centres around all aspects that concern your health, well-being and comfort in relation to our products and services, today as well as for future generations.

For more details visit www.forbo-flooring.co.uk/CHO

Health refers to a safe, clean and comfortable environment both at home and in your work place. But health is much more: it determines the way you live.

Through our flooring solutions it is our ambition to make a positive contribution to your health and well-being in your environment. That is why for us our commitment to sustainability is a commitment to your health.

SAFETY

In safe indoor environments floors are non-toxic, low emitting and compliant to all international standards. On top of this, a safe floor is designed to prevent accidents, guiding the visually impaired and comforting dementia patients, just as it creates a safe environment in clean room facilities and operating theatres.

HYGIENE

Hygienic flooring solutions are designed to be easy to clean, controlling fine dust in one environment and preventing allergies in another. Hygienic flooring solutions are specific to the application, they can be used for aiding infection control or as the basis for a clean playing environment.

WELL-BEING

A state of well-being and comfort can be achieved by being in control of factors that stimulate the senses in the indoor environment. Through their colour and design, floors are capable of creating the atmosphere of an indoor space, making people feel relaxed and comfortable or vibrant and energetic.

Green Certification 2

The Nordic Swan, Blue Angel, BREEAM and natureplus are just a few of the sustainable product labels that Forbo complies to.

Just visit www.forbo-flooring.co.uk/cbe to find out more.

BREEAM

[Building Research Establishment Environmental Assessment Methodology]

BREEAM is the world's most well-known environmental assessment for buildings. As the table opposite shows, Forbo wants you to have all the information you need to make considered decisions – even though there are many of them, we don't just show you our A+ rated products. To find out more about BREEAM or the ratings included here, visit www.forbo-flooring.co.uk/CBE

Ska

Ska rating is an environmental assessment method, benchmark and standard owned by RICS (Royal Institute of Chartered Surveyors). It's for use in non-domestic fit outs and is mainly used in the office and retail sectors.

Many of Forbo's ranges contribute to the overall Ska rating of a fit out.

The table opposite shows which of our products meet the best practice criteria for soft floor coverings in office, retail and higher education schemes.

LEED

[Leadership in Energy and Environmental Design]

LEED is the most widely used environmental certification programme in the US, and is recognised internationally.

This programme awards ratings based on the whole performance of a building, instead of individual products, such as flooring.

To find out more about our LEED ratings visit the downloads section of our web site and download the environmental product data sheet for the relevant product www.forbo-flooring.co.uk/cbedownloads
