

Forbo Flooring Systems has different kinds of total system solutions, all designed to help save time and effort. The solutions vary from quick installation to acoustical better performance solutions to flooring solutions that can easily be installed and many, many more. Please contact us for more information or look at www.forbo-flooring.com.

Forbo Flooring Systems is part of the Forbo Group, a global leader in flooring, bonding and movement systems, and offers a full range of flooring products for both commercial and residential markets. High quality linoleum, vinyl, needle punch and hardwood floors combine functionality, colour and design, giving you total flooring solutions for any environment.

creating better environments

Complete, ready made and proven flooring installations.

We've solved it!

system solutions
static control

creating better environments

Safety first whenever it matters

- Different solutions
- No contribution to static generation
- Easy to install

Static Control System Solutions

When a floor is not grounded a person can be charged like an electrical capacitor. The moment contact is made with grounded equipment, this charge will be discharged rapidly. As a result electronic equipment can be damaged, critical data may be lost, and even whole departments may be out of order. If a floor construction is 'antistatic' but not capable of reducing charges correctly that is applicable for the equipment it is supposed to protect, then it is in fact of no use.

Consequently, static control behaviour is not only about the floor covering; proper installation and use of the right installation materials can make or break the static control capability of a floor. The Static Control System Solutions concept by Forbo Flooring Systems: suitable floor covering and the best compatible installation materials, easy groundability and no need for special treatment, resulting in a true static control floor package.

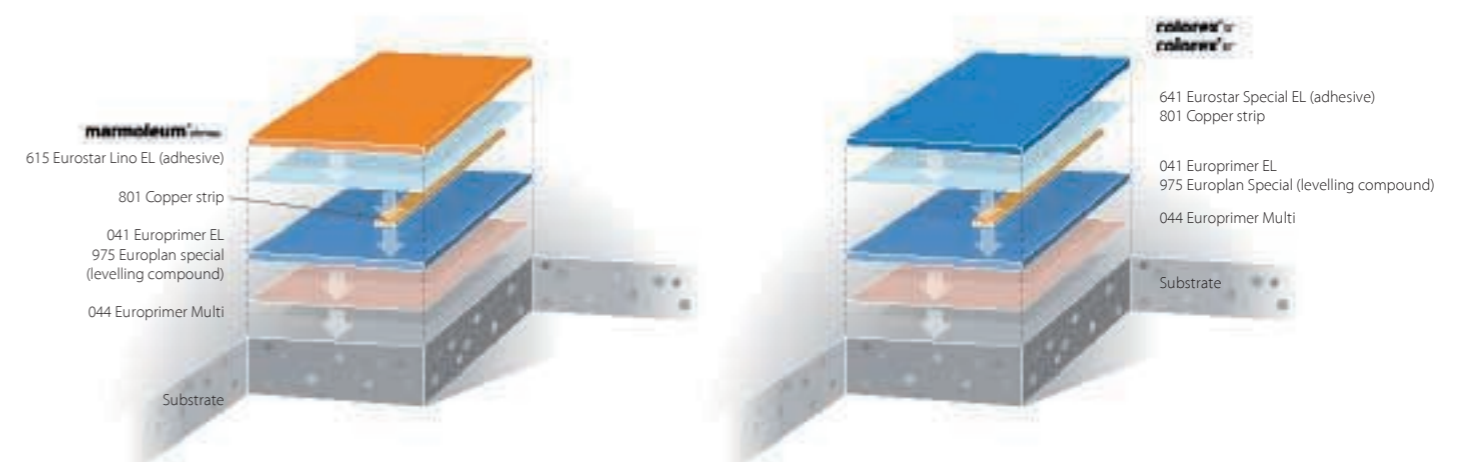

Marmoleum Ohmex System Solutions

Electrical resistance according EN 1081 1-10⁶
 $< R_1 < 1 \times 10^8 \Omega$: Static Dissipative. A linoleum based construction, consisting of conductive primer, levelling compound, copper strip and adhesive all to ensure optimal conductivity.

Colorex SD/EC System Solutions

Colorex floor coverings feature conductive coated chips forming a solid, homogeneous PVC compound, stable in size and dimensions, for constant, permanent electrical properties not influenced by ambient humidity or aging. Colorex comes in 2 versions;

- Colorex SD ($R \leq 10^8 \Omega$ according to EN-1081)
- Colorex EC ($R \leq 10^6 \Omega$ according to EN-1081).

Protect people and equipment,
the Static Control System Solutions
