

Installation Guide: Sheet flooring with flexible transition profiles

Product Detailing

Transitions are flexible edgings that help trim the edges and joins to vinyl floor coverings when they need to be finished off to a different thickness, plus a selection of edgings that cover and protect joins and transitions in different floor coverings. They protect the joints and also prevent worn and frayed floor covering edges from becoming a trip hazard.

Features and Benefits

- Profiles can be curved on-site, to a radius of 0.75–1 m when heated.
- Range of profiles for joins between floorcovering of equal or differing heights.
- Provides a neat, safe finish at junctions between floorcoverings.
- Available in a range of colours, and a variety of stock lengths and packing; see manufacturer's literature for details.

Range of transitions suitable for Forbo floor coverings up to maximum 9mm compression thickness.

Fitting

- i) Floor Trims - Ramp Edge: Apply adhesive to the floor and base of the profile. Fit the floorcovering under flap with foot/flange, with ramp down to the other side.
- ii) Floor Trims - Dual Edge: Apply adhesive to the floor and base of the profile. Fit the 'thinner' floorcovering under flap with foot/flange and the 'thicker' floorcovering on the other side.
- iii) Ramp Trims: Apply the adhesive to the floor, the edge of the floorcovering and the bottom of the ramp edge.
