Fitting

- 1) Make sure that all surfaces to which TopClip is to be fixed are sound, dry, flat and free from any contaminants.
- 2) Mark out on the floor where you want the transition to go. (uPVC bases can be curved on-site up to a radius of approx. 750 mm.)
- 3) Cut the profile top and base to the size required.
- 4) Drill the marked substrate using a 6 mm drill bit and once drilled insert the appropriately sized plug. (6 mm = red plug).
- 5) Secure base in place using a No. 6 fixing screw. Follow curve if required applying screw at each hole point following the marking out.
- 6) Fit both floorcoverings either side of the base, making sure the floorcoverings are butted up to the base.
- 7) Finish by clipping top into base, use a rubber mallet if required, use gentle heat.
