Report

Project number : 89205102
Report number : 89205102.01br

Received:
A sample of a heterogeneous PVC floor covering marked as: "Allura 0.55"; TÜV sample reference: MT14-38875.01.

The samples have been received on the 10th of January 2014.

Sampling procedure:
The samples are selected by the applicant.
The test house has had no influence on the sampling procedure.

Product information received from the customer:
Type of floor covering : Heterogeneous PVC floor covering
Product classification standard : EN 649
Type of backing : Compact layer, black coloured.
Total mass : 3150 g/m²*
Total thickness : 2.20 mm *
Thickneess of the toplayer : 0.55 mm
Use of fire-retardant : No
* Verified by test institute.

Request:

Test method:
Ignitability (direct impingement of flame) : EN ISO 11925-2.
Reaction to fire (radiant panel) : EN ISO 9239-1.

Results:
See page two.

Appendix:
See page three up to and including eleven.
TEST RESULTS

- **Ignitability EN-ISO 11925-2:2010**

  Conditioning time, climate: 3 days, 23 ± 2 °C and 50 ± 5 %
  Date of testing: January 14th, 2014
  Description of substrate: 6 mm. Fibre cement board, 1800 kg/m³.
  Flame application: Surface.
  Application time: 15 seconds.

1 Inclusive a flame application time of 15 or 30 seconds with surface or edge impingement
2 Shrinks away from flame without being ignited
3 The time at which it occurs and its duration

- **Radiant Panel test ISO 9239-1:2010**

  Date of testing: January 14th, 2014
  Conditioning time, climate: 3 days, 23 ± 2 °C and 50 ± 5 %
  Description of substrate: Fibre cement board, 8±2 mm, 1800±200 kg/m³, conforming to EN 13238.
  Sampling procedure: By contractor.
  Description of cleaning used: None.
  Fixing method: None, loose laid.

Remarks: Flashing observed, no transitory- or sustained flaming observed.  
All four tested specimen extinguished naturally before the end of the test duration
CONCLUSION

According to EN 13501-1:2007+ A1:2009 the tested sample of the aforementioned quality Allura 0.55, in relation to its reaction to fire behaviour is classified: $B_n$. The additional classification in relation to smoke production is: $s1$.

The aforementioned quality meets the requirement of reaction to fire classification: $B_n - s1$

The classification is valid for the following end use applications:
- End use substrates of classes A1 and A2-s1,d0, for example fibre cement board.
- Any means of fixation.

Statements:
The test results only relate to the behaviour of the test specimens of the examined product under the particular conditions of the test in laboratory conditions; they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use. The method might not be suitable if the product is exposed to much larger flames or heat radiant sources.

The validity of this report will expire five years after its issue or directly after alterations or modifications of the examined product (combination)(s) and/or the criteria. This report shall not be reproduced, except in full, without the written approval of the testing laboratory.

This document does not represent type approval or certification of the product.
