

Coral is the market leader in entrance systems providing an exceptionally versatile and proven range of 'clean-off' entrance system products and customisable carpets.

Coral Marine FR is a cut pile floor covering consisting of 60% wool and 40% nylon. It is the ideal choice for an entrance system, simultaneously absorbing moisture and removing dry soiling. Coral entrance systems can reduce cleaning costs and prolong the life of on-board floor finishes and coverings.

Coral Marine FR has been IMO tested and approved and wheelmarked in accordance with the Marine Equipment Directive (MED), for products used in seagoing vessels. Yarn and backing systems have been developed to meet the stringent smoke toxicity and low flame spread standards required to achieve the 'Wheelmark'.

As a result Coral Marine FR can be used with confidence in cruise liners, passenger ferries, charter boats and other seagoing vessels, in addition to offshore facilities where the 'Wheelmark' classification is required.
