THE CONVEYOR BELT FOR
SUSTAINABLE CONVEYING –
**TRANSILON
ECOFIBER**

TRANSILON ECOFIBER – SUSTAINABLE USE OF MATERIALS AND COST-EFFICIENT OPERATION

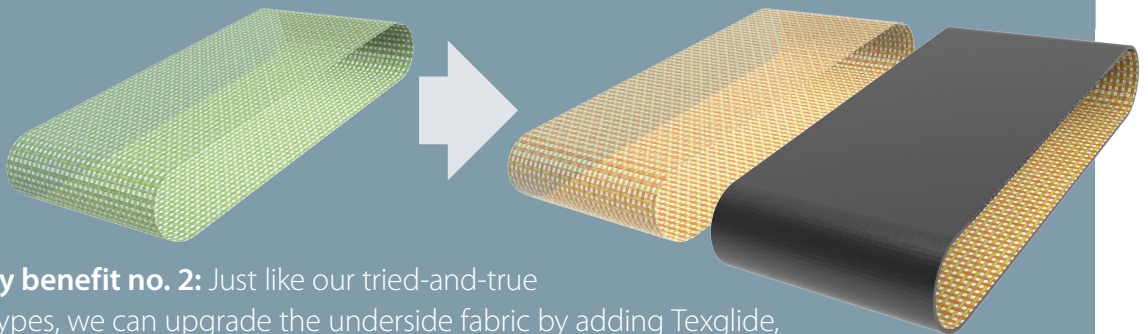

TENSION
MEMBER MADE
EXCLUSIVELY OF
RECYCLED PET
BOTTLES

1

Sustainability benefit no. 1: Transilon ECOFIBER's tension member fabric is made exclusively of recycled PET bottles. As a result, we save valuable resources during its manufacture, without compromising on quality or durability. At the same time, we cut energy consumption and carbon emissions significantly.

2

Sustainability benefit no. 2: Just like our tried-and-true Amp Miser™ types, we can upgrade the underside fabric by adding Texglide, which is patented and acts as a permanent, dry lubricant. This minimizes energy consumption and carbon emissions during operation. As a result, on long conveyors with heavy loads, you can save up to 50% of power requirements every day. This savings potential has been corroborated by numerous consumption measurements and confirmed by German inspection body TÜV Rheinland.

Transilon ECOFIBER –

an investment in sustainability that
doesn't just pay environmental dividends.

Why not improve your company's sustainability
performance with Transilon ECOFIBER now?
Your Forbo expert would be happy to advise you.
