ENVIRONMENTAL PRODUCT DECLARATION

as per /ISO 14025/ and /EN 15804/

Owner of the Declaration Forbo Flooring BV

Programme holder Institut Bauen und Umwelt e.V. (IBU

Publisher Institut Bauen und Umwelt e.V. (IBU)

Declaration number EPD-FOR-20190014-CCA1-EN

Issue date 13.02.2019 Valid to 12.02.2024

Forbo Peace woven carpet tiles

pile material polyamide 6.6, total pile weight 550 g/m²

Forbo Flooring Systems

www.ibu-epd.com / https://epd-online.com

General Information

Forbo Flooring Systems Woven carpet tiles pile material PA 6.6, max. total pile weight 550 g/m² TEXtile backing Programme holder Owner of the declaration IBU - Institut Bauen und Umwelt e.V. Forbo Flooring BV, Panoramastr. 1 P.O. Box 13. 10178 Berlin 1560 AA Krommenie Germany Netherlands **Declaration number** Declared product / declared unit EPD-FOR-20190014-CCA1-EN 1 m² woven carpet tiles having a pile material of PA 6.6 This declaration is based on the product category rules: The manufacturer declaration applies to a product with Floor coverings, 02/2018 a total pile weight of 550 g/m². (PCR checked and approved by the SVR) The carpet is woven at an external manufacturing site Bording, Denmark. Dyeing and backing of the carpet is carried out externally. Issue date The declaration is only valid in conjunction with a valid 13.02.2019 GUT-/PRODIS/ license of the product. Valid to The owner of the declaration shall be liable for the 12.02.2024 underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences. Verification Wermanes The standard /EN 15804/ serves as the core PCR Independent verification of the declaration and data according to /ISO 14025:2010/ Prof. Dr.-Ing. Horst J. Bossenmayer (President of Institut Bauen und Umwelt e.V.) internally externally and Walls

Product

Dr. Alexander Röder (Managing Director IBU)

Product description / Product definition

Forbo Peace flat woven carpet tiles having a pile material of polyamide 6.6 (PA 6.6) and a TEXtile backing.

The declaration applies to a product with a total pile weight of 550 g/m².

For the placing on the market of the product in the European Union/European Free Trade Association (EU/EFTA) (with the exception of Switzerland) Regulation (EU) No. 305/2011 /CPR/ applies. The Declaration of Performance of the products taking into consideration /EN 14041/ and the CE-marking of the products can be found on the manufacturer's technical information section.

Application

Angela Schindler

(Independent verifier appointed by SVR)

According to the use class as defined in /EN 1307/ the products can be used in all professional area which require class 33 or less.

Technical Data

Name	Value	Unit
Product Form	Tiles of several	
Floduct Folili	dimensions	_
Type of manufacture	Flat woven	-
Yarn type	Polyamide 6.6	-
	TEXtile backing	
Secondary backing	with recycled	-
	content	
Total pile weight	550	g/m²
Total carpet weight	3800	g/m²

Additional product properties in accordance with /EN 1307/ and performance data of the product in accordance with the Declaration of Performance with respect to its Essential Characteristics according to /EN 14041/ can be found on the Product Information System /PRODIS/ using the /PRODIS/ registration number of the product (www.pro-dis.info) or on the manufacturer's technical information section (www.forbo.com).

Base materials / Ancillary materials

Name	Value	Unit
Polyamide 6.6	14.5	%
Polyethylenterephthalate (PET)	20	%
Mineral filler	40.5	%
Aluminium hydroxide	2.3	%
Ethyl vinyl acetate (EVA)	17.4	%
Polymer dispersion (dry substance)	4.6	%
Glass fibre	0.4	%
Additives	0.3	%

The products are registered in the GUT-/PRODIS/ Information System. The /PRODIS/ system ensures the compliance with limitations of various chemicals and Volatile Organic Compound (VOC) emissions and a ban on use of all substances that are listed as 'Substances of Very High Concern' (SVHC) under /REACH/.

This product contains substances listed in the candidate list (27.06.2018) exceeding 0.1 percentage by mass: no

Reference service life

A calculation of the reference service life according to /ISO 15686/ is not possible.

The service life of textile floor coverings strongly depends on the correct installation taking into account the declared use classification and the adherence to cleaning and maintenance instructions.

A minimum service life of 10 years can be assumed, technical service life can be considerably longer.

LCA: Calculation rules

Declared Unit

Name	Value	Unit
Declared unit	1	m ²
Conversion factor to 1 kg	0.31	-
Mass reference	3.25	kg/m²

The declared unit refers to 1 m^2 produced textile floor covering. Output of module A5 'Assembly' is 1 m^2 installed textile floor covering.

System boundary

Type of EPD: Cradle-to-grave

<u>System boundaries of modules A, B, C, D:</u>
Modules C3, C4 and D are indicated separately for three end-of-life scenarios:

- 1 landfill disposal
- 2 municipal waste incineration
- 3 recovery in a cement plant

A1-A3 Production:

3

Energy supply and production of the basic material, processing of secondary material, auxiliary material, transport of the material to the manufacturing site, emissions, waste water treatment, packaging material

and waste processing up to the landfill disposal of residual waste (except radioactive waste). Benefits for generated electricity and steam due to the incineration of production waste are aggregated.

A4 Transport:

Transport of the packed textile floor covering from factory gate to the place of installation.

A5 Installation:

Installation of the textile floor covering, processing of installation waste and packaging waste up to the landfill disposal of residual waste (except radioactive waste), the production of the amount of carpet that occurs as installation waste including its transport to the place of installation.

Generated electricity and steam due to the incineration of waste are listed in the result table as exported energy.

Preparing of the floor and auxiliary materials (adhesives, fixing agents, PET connectors) are beyond the system boundaries and not taken into account.

B1 Use:

Indoor emissions during the use stage. After the first year, no product related Volatile Organic Compound (VOC) emissions are relevant due to known VOC decay curves of the product.

B2 Maintenance:

Cleaning of the textile floor covering for a period of 1 year:

Vacuum cleaning – electricity supply

Wet cleaning – electricity, water consumption, production of the cleaning agent, waste water treatment.

The declared values in this module have to be multiplied by the assumed service life of the floor covering in the building in question (see annex, chapter 'General information on use stage').

B3 - B7:

The modules are not relevant and therefore not declared.

C1 De-construction:

The floor covering is de-constructed manually and no additional environmental impact is caused.

C2 Transport:

Transport of the carpet waste to a landfill, to the municipal waste incineration plant (MWI) or to the waste collection facility for recycling.

C3 Waste processing:

C3-1: Landfill disposal needs no waste processing.

C3-2: Impact from waste incineration (plant with

R1>0.6), generated electricity and steam are listed in the result table as exported energy.

C3-3: Collection of the carpet waste, waste processing (granulating).

C4 Disposal

C4-1: Impact from landfill disposal,

C4-2: The carpet waste leaves the system in module C3-2.

C4-3: The pre-processed carpet waste leaves the system in module C3-3

D Recycling potential:

Calculated benefits result from materials exclusive secondary materials (net materials).

D-A5: Benefits for generated energy due to incineration of packaging and installation waste (incineration plant with R1 > 0.6),

D-1: Benefits for generated energy due to landfill disposal of carpet waste at the end-of-life,

D-2: Benefits for generated energy due to incineration of carpet waste at the end-of-life (incineration plant with R1 > 0.6),

D-3: Benefits for saved fossil energy and saved inorganic material due to recovery of the carpet in a cement plant at the end-of-life, transport from the reprocessing plant to the cement kiln.

Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

Background data are taken from the /GaBi database 2018/, service pack 36 and from the /ecoinvent 3.5/ database

LCA: Scenarios and additional technical information

The following information refer to the declared modules and are the basics for caluclations or can be used for further calculations.

Transport to the construction site (A4)

Name	Value	Unit
Litres of fuel (truck, EURO 0-6 mix)	0.0064	l/100km
Transport distance	700	km
Capacity utilisation (including empty runs)	85	%

Installation in the building (A5)

Name	Value	Unit
Material loss	0.11	kg

Polyethylene packaging waste and installation waste are considered to be incinerated in a municipal waste incineration plant. Cardboard packaging waste is going to be recycled

Preparation of the floor and auxiliaries (adhesives, fixing agents, PET connectors, etc.) are not taken into account

Maintenance (B2)

The values for cleaning refer to one m² floor covering used in commercial areas per year (see annex, chapter 'General Information on use stage'). Depending on the application based on EN ISO 10874, the technical service life recommended by the manufacturer and the anticipated strain on the floor by customers, the case-specific useful life can be established. The effects of Module B2 need to be calculated on the basis of this useful life in order to obtain the overall environmental impacts.

Name	Value	Unit
Maintenance cycle (wet cleaning)	1.5	1/year
Maintenance cycle (vacuum cleaning)	208	1/year
Water consumption (wet cleaning)	0.004	m³
Cleaning agent (wet cleaning)	0.09	kg
Electricity consumption	0.314	kWh

Further information on cleaning and maintenance see www.forbo.com

End of Life (C1-C4)

Three different end-of-life scenarios are declared and the results are indicated separately in module C. Each scenario is calculated as a 100% scenario.

Scenario 1: 100% landfill disposal

Scenario 2: 100% municipal waste incineration (MWI)

with R1>0.6

Scenario 3: 100% recycling in the cement industry

If combinations of these scenarios have to be calculated this should be done according to the following scheme:

EOL-impact = x% impact (Scenario 1)

+ y% impact (Scenario 2)

+ z% impact (Scenario 3)

Name	Value	Unit
Collected as mixed construction waste (scenario 1 and 2)	3.25	kg
Collected separately (scenario 3)	3.25	kg
Landfilling (scenario 1)	3.25	kg
Energy recovery (scenario 2)	3.25	kg
Energy recovery (scenario 3)	2.15	kg
Recycling (scenario 3)	1.65	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information

Recovery or recycling potentials due to the three endof-life scenarios (module C) are indicated separately.

Recycling in the cement industry (scenario 3): NDZ e.V./

5

The organic material of the carpet is used as secondary fuel in a cement kiln. It mainly substitutes for lignite (62.2%), hard coal (27.3%) and petrol coke

The inorganic material is substantially integrated in the cement clinker and substitutes for original material input.

weight 550 g/m²

LCA: Results

The declared result figures in module B2 have to be multiplied by the assumed service life (in years) of the floor covering in the building under consideration (see annex, chapter 'General Information on use stage').

Information on un-declared modules:

Modules B3 - B7 are not relevant during the service life of the carpet and are therefore not declared. Modules C1, C3/1, C4/2 and C4/3 cause no additional impact (see "LCA: Calculation rules") and are therefore not declared. Module C2 represents the transport for scenarios 1, 2 and 3. Column D represents module D/A5. The /CML/ characterisation factors version January 2016 are applied.
