**Forbo Peace woven broadloom carpet**
pile material polyamide 6.6, aqueous dyeing method,
total pile weight 550 g/m²

**Forbo Flooring Systems**

www.ibu-epd.com / https://epd-online.com
General Information

Forbo Flooring Systems

Programme holder
IBU - Institut Bauen und Umwelt e.V.
Panoramastr. 1
10178 Berlin
Germany

Declaration number
EPD-FOR-20170126-CBA1-EN

This declaration is based on the product category rules:
Floor coverings, 02/2018
(PCR checked and approved by the SVR)

Issue date
11.04.2017

Valid to
10.04.2022

Verification
The standard /EN 15804/ serves as the core PCR
Independent verification of the declaration and data according to /ISO 14025:2010/

Prof. Dr.-Ing. Horst J. Bossenmayer
(President of Institut Bauen und Umwelt e.V.)

Dr. Burkart Lehmann
(Managing Director IBU)

Angela Schindler
(Independent verifier appointed by SVR)

Woven broadloom carpet
pile material PA 6.6,
total pile weight 550 g/m²

Owner of the declaration
Forbo Flooring BV,
P.O. Box 13,
1560 AA Krommenie
Netherlands

Declared product / declared unit
1 m² woven broadloom carpet having a pile material of polyamide 6.6

Scope:
The manufacturer declaration applies to a product with a total pile weight of 550 g/m².
The carpet is woven in an external manufacturing site Bording, Denmark and it is dyed, precoated and back coated externally, Bording, Denmark.
The declaration is only valid in conjunction with a valid GUT-/PRODIS/ license of the product.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Application
According to the use class as defined in /EN 1307/ the products can be used in all professional area which require class 33 or less.

Product

Product description / Product definition
Forbo Peace flat woven broadloom carpet having a pile material of polyamide 6.6 and a woven textile backing made of polyester with recycled content.
The carpet is colored by a continuous dyeing method.
The LCA results are calculated for a product with a total pile weight of 550 g/m².

For the placing on the market of the product in the EU/EFTA (with the exception of Switzerland) Regulation (EU) No. 305/2011 /CPR/ applies. The Declaration of Performance of the products taking into consideration /EN 14041/ and the CE-marking of the products can be found on the manufacturer's technical information section.
Technical Data

The products are registered in the GUT-/PRODIS/ Information System. The /PRODIS/ system ensures the compliance with limitations of various chemicals and VOC-emissions and a ban on use of all substances that are listed as 'Substances of Very High Concern' (SVHC) under /REACH/.

Reference service life

A calculation of the reference service life according to /ISO 15686/ is not possible.

The service life of textile floor coverings strongly depends on the correct installation taking into account the declared use classification and the adherence to cleaning and maintenance instructions. A minimum service life of 10 years can be assumed, technical service life can be considerably longer.

LCA: Calculation rules

Declared Unit

<table>
<thead>
<tr>

<td>kg/m²</td>
</tr>
</tbody>
</table>

The declared unit refers to 1 m² produced textile floor covering. Output of module A5 'Assembly' is 1 m² installed textile floor covering.

System boundary

Type of EPD: Cradle-to-grave

System boundaries of modules A, B, C, D:

A1-A3 Production:
Energy supply and production of the basic material, processing of secondary material, auxiliary material, transport of the material to the manufacturing site, emissions, waste water treatment, packaging material and waste processing up to the landfill disposal of residual waste (except radioactive waste). Benefits for generated electricity and steam due to the incineration of production waste are aggregated.

A4 Transport:
Transport of the packed textile floor covering from factory gate to the place of installation.

A5 Installation:
Installation of the textile floor covering, processing of installation waste and packaging waste up to the landfill disposal of residual waste (except radioactive waste), the production of the amount of carpet that occurs as installation waste including its transport to the place of installation. Generated electricity and steam due to the incineration of waste are listed in the result table as exported energy.

Preparing of the floor and auxiliary materials (adhesives, fixing agents, PET connectors) are beyond the system boundaries and not taken into account.

B1 Use:
Indoor emissions during the use stage. After the first year, no product related VOC emissions are relevant due to known VOC decay curves of the product.

B2 Maintenance:
Cleaning of the textile floor covering for a period of 1 year:
Vacuum cleaning – electricity supply
Wet cleaning – electricity, water consumption, production of the cleaning agent, waste water treatment.

The declared values in this module have to be multiplied by the assumed service life of the floor
Environmental Product Declaration Forbo Flooring – Forbo Peace woven broadloom carpet, pile material polyamide 6.6, aqueous dyeing method, total pile weight 550 g/m²

covering in the building in question (see annex, chapter 'General information on use stage').

B3 - B7:
The modules are not relevant and therefore not declared.

C1 De-construction:
The floor covering is de-constructed manually and no additional environmental impact is caused.

C2 Transport:
Transport of the carpet waste to a landfill, to the municipal waste incineration plant (MWI) or to the waste collection facility for recycling.

C3 Waste processing:
C3-1: Landfill disposal need no waste processing.
C3-2: Impact from waste incineration (plant with R1>0.6), generated electricity and steam are listed in the result table as exported energy.
C3-3: Collection of the carpet waste, waste processing (granulating).

C4 Disposal
C4-1: Impact from landfill disposal,
C4-2: The carpet waste leaves the system in module C3-2,
C4-3: The pre-processed carpet waste leaves the system in module C3-3

D Recycling potential:
D-A5: Benefits for generated energy due to incineration of packaging and installation waste (incineration plant with R1 > 0.6),
D-1: Benefits for generated energy due to landfill disposal of carpet waste at the end-of-life,
D-2: Benefits for generated energy due to incineration of carpet waste at the end-of-life (incineration plant with R1 > 0.6),
D-3: Benefits for saved fossil energy and saved inorganic material due to recovery of the carpet in a cement plant at the end-of-life, transport from the reprocessing plant to the cement kiln.

Comparability
Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

Background data are taken from the /GaBi database 2017/, service pack 33 and from the /ecoinvent 3.3/ database.

LCA: Scenarios and additional technical information

The following information refer to the declared modules and are the basis for calculations or can be used for further calculations.

Transport to the construction site (A4)

<table>
<thead>
<tr>

</tr>
<tr>
<td>Electricity consumption</td>
<td>0.314</td>
<td>kWh</td>
</tr>
</tbody>
</table>

Further information on cleaning and maintenance see www.forbo.com

End of Life (C1-C4)
Three different end-of-life scenarios are declared and the results are indicated separately in module C. Each scenario is calculated as a 100% scenario.

Scenario 1: 100% landfill disposal
Scenario 2: 100% municipal waste incineration (MWI) with R1>0.6
Scenario 3: 100% recycling in the cement industry

If combinations of these scenarios have to be calculated this should be done according to the following scheme:

EOL-impact = x% impact (Scenario 1) + y% impact (Scenario 2) + z% impact (Scenario 3)
### Name | Value | Unit
--- | --- | ---
Collected as mixed construction waste (scenario 1 and 2) | 2.15 | kg
Collected separately (scenario 3) | 2.15 | kg
Landfilling (scenario 1) | 2.15 | kg
Energy recovery (scenario 2) | 2.15 | kg
Energy recovery (scenario 3) | 1.32 | kg
Recycling (scenario 3) | 0.83 | kg

## Reuse, recovery and/or recycling potentials (D), relevant scenario information

Recovery or recycling potentials due to the three end-of-life scenarios (module C) are indicated separately.

### Recycling in the cement industry (scenario 3) /VDZ e.V./

The organic material of the carpet is used as secondary fuel in a cement kiln. It mainly substitutes for lignite (61.9%), hard coal (26.8%) and petrol coke (11.3%).

The inorganic material is substantially integrated in the cement clinker and substitutes for original material input.
LCA: Results
The declared result figures in module B2 have to be multiplied by the assumed service life (in years) of the floor covering in the building under consideration (see annex, chapter ‘General Information on use stage’).

Information on un-declared modules:
Modules B3 - B7 are not relevant during the service life of the carpet and are therefore not declared.
Modules C1, C3/1 and C4/2 cause no additional impact (see "LCA: Calculation rules") and are therefore not declared. Module C2 represents the transport for scenarios 1, 2 and 3. Column D represents module D/AS. The CML characterisation factors version April 2015 are applied.

### RESULTS OF THE LCA – OUTPUT FLOWS AND WASTE CATEGORIES:

The CML characterisation factors version April 2015 are applied.

Modules C1, C3/1 and C4/2 cause no additional impact (see "LCA: Calculation rules") and are therefore not declared. Module C2 represents the transport for scenarios 1, 2 and 3. Column D represents module D/AS. The CML characterisation factors version April 2015 are applied.

### DESCRIPTION OF THE SYSTEM BOUNDARY (X = INCLUDED IN LCA; MND = MODULE NOT DECLARED)

### RESULTS OF THE LCA - ENVIRONMENTAL IMPACT: 1 m² floorcovering

#### RESULTS OF THE LCA - RESOURCE USE: 1 m² floorcovering

- **GWP**: Global warming potential; **ODP**: Depletion potential of the stratospheric ozone layer; **AP**: Acidification potential of land and water; **EP**: Eutrophication potential; **POCP**: Formation potential of tropospheric ozone photochemical oxidants; **ADPE**: Abiotic depletion potential for non-fossil resources; **ADPF**: Abiotic depletion potential for fossil resources.

### RESULTS OF THE LCA – OUTPUT FLOWS AND WASTE CATEGORIES:

1 m² floorcovering

- **HWD**: Hazardous waste disposed; **NHWD**: Non-hazardous waste disposed; **RWD**: Radioactive waste disposed; **CRU**: Components for re-use; **MFR**: Materials for recycling; **MER**: Materials for energy recovery; **EEE**: Exported electrical energy; **EEE2**: Exported thermal energy.
