siegling prolink
modular belts

PRODUCT RANGE
Traditional conveyor belts are often intended for generic use, but the design features of Siegling Prolink modular belts are aimed at providing specific processing and application benefits. This is why the Siegling Prolink modular belts are a perfect addition to Forbo Movement Systems existing wide range of belting products. Our vast experience in conveying and processing applications, combined with our line of highly specialized belts ensure that we can offer optimized conveying solutions regardless of the application. The Forbo Movement Systems name is synonymous with not only superior product quality, but also with professional technical support and quality service.
Modular means adaptable

Siegling Prolink offer a wide product range with many different module designs. Modules within individual product series can easily be combined. As a result, Siegling Prolink modular belts can be customized to suit individual conveying and processing tasks. We will help you identify the optimal solution for your specific needs.

Siegling Prolink is used successfully in a broad range of applications in industries such as:

- fruit and vegetable processing
- baked goods manufacturing
- meat, poultry and seafood processing
- automotive and tire manufacturing
- logistics

In these areas, Siegling Prolink modular belts often play a significant role beyond conveying.

Benefits of modular belting

Modular belts are robust and durable and can handle conveying and processing tasks which may not be possible with conventional conveyor belting materials and types.

When assembled and installed, modular belts are endless, but if damage occurs, individual modules can quickly be replaced, thereby minimizing down time and maintenance costs. Modular belts can be supplied in any length and width and if needed, functional modules can be added at any time so belt properties can be changed if required.

The Siegling Prolink System – Every belt is a specialist!
The high quality standards applied to the manufacturing and fabrication of Siegling Prolink modular belts ensure optimal application performance and the highest level of customer satisfaction. Our products are manufactured in accordance with the ISO 9001 QM-system which is audited and updated quarterly. Manufacturing tolerances, on-going testing and monitoring performed by our highly trained staff ensure a consistent and high level of product quality.
SIEGLING PROLINK DESIGN AND QUALITY

R & D Concepts

When developing Siegling Prolink modular belts and components, we collaborate closely with OEMs and end-users to ensure that customer expectations and application requirements are met. Many Prolink components are designed for particular conveying applications and processing requirements. This is your guarantee for optimal application performance when utilizing Siegling Prolink modular belts.

Manufacturing quality

Our state-of-the-art design, tooling and processing technology reflect the importance we place on the ability to manufacture flawless components and parts according to specifications. A smooth surface is one of the hallmarks of superior-quality injection molded parts. We place an emphasis on maximizing the quality and consistency of all molded parts.

Tolerances

Siegling Prolink injection molded modules and components as well as assembled belts are manufactured to tight tolerances. This is an integral part of our overall product design and allows for easy and efficient fabrication, and belt repair if needed. Reliable, actual belt dimensions are easily obtainable and can help simplify conveyor designs.

Materials

We apply the same stringent requirements and demands from our material suppliers as we do from ourselves. Close collaboration with suppliers and vendors not only guarantees consistently high-quality parts and components when using standard materials but also when special materials are needed from time to time to meet specific application requirements and conditions. This is especially important if application temperatures are excessive or if chemical degradation from sanitizers is likely.
Siegling Prolink modular belts can be customized by using modules with different surface patterns and openings. Side guards, profiles and other accessories such as friction pads, wheel stoppers and Hold Down tabs can be added to most belt series, thereby optimizing the application.

Special modules and accessories for further customization are available, or can be developed according to customer specifications.

Please contact us if you have a specific request requiring a customized conveying application.

Straight running belts

**Series 1 | Pitch 50 mm (1.97 in)**
Belts for medium to heavy-duty industrial conveying applications

**Series 2 | Pitch 25 mm (0.98 in)**
Belts for light-duty food and container handling applications

### Design characteristics
- Narrow, closed hinge design provides high belt pull capacity
- Rigid module design makes belt suitable for long conveyors
- Closed solid edge design

#### Available surface pattern and opening area

- S1-0 FLT: Closed, smooth surface
- S1-0 SRS: Closed, slip-resistant surface
- S1-18 FLT: Open (18%), smooth surface
- S1-0 NSK: Closed surface and non-skid pattern
- S1-0 FRT1: Closed surface with friction top

### Design characteristics
- Hinges that open wide provides an easy-to-clean belt design
- Low belt weight reduces energy consumption
- Open edge design on flat top versions for unhindered drainage and closed edge design on grid top and raised rib versions

#### Available surface pattern and opening area

- S2-0 FLT: Closed, smooth surface
- S2-0 FRT1: Closed surface with friction top
- S2-12 FLT: Open (12%), smooth surface
- S2-57 GRT: Open (57%), grid top surface
- S2-57 RRB: Open (57%), raised rib surface

Sprockets, profiles and side guards available in different sizes and designs.
**Series 3** | Pitch 50 mm (1.97 in)
Belts for medium-duty food applications

- **Design characteristics**
  - Hinges that open wide, combined with smooth, flat channels on the underside provides an easy-to-clean belt design
  - Open edge design for unhindered drainage

- **Available surface pattern and opening area**
  - S3-0 FLT: Closed, smooth surface
  - S3-16 FLT: Open (16%), smooth surface
  - S3-0 LRB: Closed surface with lateral ribs
  - S3-16 LRB: Open (16%) surface with lateral ribs

---

**Series 4.1** | Pitch 14 mm (0.55 in)
Belts for light to medium-duty food and non-food applications

- **Design characteristics**
  - Small pitch belt for applications requiring small transfer gaps
  - Hinges that open wide and flat channels on the underside ensure the belt is easy to clean
  - Unique sprocket design with rounded tooth edges provides ideal load distribution
  - Wide sprocket teeth ensure superior sprocket engagement and strength

- **Available surface pattern and opening area**
  - S4.1-0 FLT: Closed, smooth surface
  - S4.1-0 NPY: Closed surface with inverted pyramid pattern
  - S4.1-0 FRT1: Closed surface with friction top
  - S4.1-21 FLT: Open (21%), smooth surface
  - S4.1-21 NTP: Open (21%) surface with round studs. Version available without round studs at the side (25 mm indent)

---

Sprockets, profiles and side guards available in different sizes and designs

**Note:** NSF-compliant from these certified Forbo plants: Huntersville (USA), Maharashtra (India), Malacky (Slovakia), NSW (Australia), Pinghu (China), Saint-Petersburg (Russia), Shizuoka (Japan), Tlalnepantla (Mexico)
Straight running belts

**Series 6.1** | Pitch 50 mm (1.97 in)
Belts for medium to heavy-duty, hygiene-critical applications

**Design characteristics**
- Wide modules and eyelets for less soiling
- Hinges that open wide, wide channels on the underside and a continuous drive bar for an easy-to-clean design
- Robust design and smooth, cut-resistant surface (depending on material)
- Special sprocket design with enhanced tooth engagement for excellent force transmission

**Available surface pattern and opening area**
- S6.1-0 FLT
  - Closed, smooth surface
- S6.1-0 NTP
  - Closed surface and round studs
- S6.1-0 CTP
  - Closed surface and pointed studs
- S6.1-21 FLT
  - Open (21%), smooth surface
- S6.1-23 FLT
  - Open (23%), smooth surface
- S6.1-36 FLT
  - Open (36%), smooth surface

**Series 7** | Pitch 40 mm (1.57 in)
Belts for heavy-duty non-food applications

**Design characteristics**
- Closed-hinge design provides high belt pull capacity
- Small-pitch relative to belt thickness makes belt suitable for compact, heavily loaded conveyors
- Robust design with large surface contact area ensures superior wear life
- Closed solid edge
- Flame retardant version available (PXX-HC – in line with DIN EN 13501-1)

**Available surface pattern and opening area**
- S7-0 FLT
  - Closed, smooth surface
- S7-0 SRS
  - Closed, slip-resistant surface
- S7-6 FLT
  - Open (6%), smooth surface
- S7-0 NSK
  - Closed surface with non-skid pattern
- S7-6 NSK
  - Open (6%) surface with non-skid pattern
- S7-0 FRT1
  - Closed surface with friction top

Sprockets, profiles, side guards and Hold Down tabs available in different sizes and designs

Sprockets and wheelstoppers available in different sizes and designs
Series 8 | Pitch 25.4 mm (1 in)
Belts for medium to heavy-duty applications

Series 10 | Pitch 25.4 mm (1 in)
Belts for light to medium-duty hygiene-critical applications

Design characteristics
– Closed hinge design provides high belt pull capacity
– Rigid module design makes belt suitable for long conveyors
– Robust design guarantees superior durability
– Closed solid edge design
– Flame retardant version available (PXX-HC – in line with DIN EN 13501-1)

Available surface pattern and opening area

S8-0 FLT
Closed, smooth surface

S8-0 SRS
Closed, slip-resistant surface

S8-0 NSK/S8-0 NSK2
Closed surface with non-skid pattern

S8-25 RAT
Open (25%) surface with rounded contact surfaces

S8.1-30 FLT
Open (30%) flat top surface with rounded hinges

S8-0 FRT1
Closed surface with friction top

S8-0 RTP A90
Closed surface with roller top

Available surface pattern and opening area

S10-0 FLT
Closed, smooth surface

S10-0 NTP
Closed surface with round studs

S10-0 FRT1
Closed surface with friction top

S10-22 FLT
Open (22%), smooth surface

S10-36 LRB
Open (36%), surface and lateral ribbing

S10-36 FLT
Open (36%), smooth surface

Sprockets, profiles, side guards and Hold Down tabs available in different sizes and designs

1) NSF-compliant from these certified Forbo plants: Huntersville (USA), Maharashtra (India), Malacky (Slovakia), NSW (Australia), Pinghu (China), Saint-Petersburg (Russia), Shizuoka (Japan), Tlalnepantla (Mexico)
Straight running belts

**Series 13** | Pitch 8 mm (0.31 in)
Belts for light-duty food and non-food nose bar applications

- Micro pitch belt with small transfer gaps
- Designed to run over nose bars/knife edges or rollers with a radius down to 3 mm (0.12 in) allowing, precise transfer of even the smallest products
- Versatile for conveying, drying and cooling applications
- Optimal design of sprocket teeth, and belt underside provides superior sprocket engagement, safe belt tracking and good cleaning capabilities
- Belt and sprocket design ensures superior load transmission and belt pull capacity
- Headless pin making it very easy to install and remove the belt for maintenance

**Available surface pattern and opening area**

- **S13-0 FLT**
  Closed, smooth surface
- **S13-0 NPY**
  Closed surface with inverted pyramid pattern
- **S13-0 CTP**
  Closed surface and pointed studs
- **S13-34 FLT**
  Open (34%), smooth surface

**Series 14** | Pitch 12.7 mm (0.50 in)
Belts for medium-duty food and non-food applications

- Mini pitch belt with small transfer gap
- Robust design guarantees superior durability and high belt pull capacity
- Design for smooth run on 19 mm (0.75 in) nose bar
- Headless pin system, making it easy to install and remove the belt for maintenance
- Closed, solid belt edge to prevent belt edge damages

**Available surface pattern and opening area**

- **S14-0 FLT**
  Closed, smooth surface
- **S14-25 FLT**
  Open (25%), smooth surface
- **S14-25 CUT**
  Open (25%) surface with curve top surface
- **S14-25 FRT1**
  Open (25%) surface with friction top

Sprockets available in different sizes and designs
Series 15 | Pitch 12.7 mm (0.50 in)
Belt for light-duty food applications utilizing 12.7 mm (0.5 in) nose bars

Design characteristics
- Mini-pitch belt with large open area for optimum airflow
- Scalloped underside facilitates smooth product transfer over a 12.7 mm (0.5 in) diameter nose bar.
- Open hinge for improved sanitation
- Narrow 25 mm (1 in) width increments offer superior support of conveyed products
- Solid and robust edge design incorporating improved pin retention
- Headless one-piece pin for easy installation and removal
- Sprockets with large solid tooth insures superior load transmission and long wear life

Available surface pattern and opening area

S15-47 GRT
Open (47%), lattice-shaped surface

S15-47 RSA
Open (47%), lattice-shaped surface with reduced surface area

Sprockets available in different sizes and designs

1) NSF-compliant from these certified Forbo plants: Huntersville (USA), Maharashtra (India), Malacky (Slovakia), NSW (Australia), Pinghu (China), Saint-Petersburg (Russia), Shizuoka (Japan), Tlalnepantla (Mexico)
Side flexing and spiral belts

**Series 5** | Pitch 25 mm (0.98 in)
Belts for light to medium-duty food and non-food applications

- Suitable for both straight and radius conveying
- Up to 45% open area for excellent air circulation and drainage
- Stainless steel hinge pins for high load capacity, lateral stiffness, fewer belt supports and minimum belt lifting in curves
- No potential belt edge catch points due to safe fixing of hinge pins

**Available surface pattern and opening area**
- S5-45 GRT
  Open (45%), lattice-shaped surface
- S5-45 NTP
  Open (45%) surface with nub tops
- S5-39 FRT1
  Open (45%) surface with friction top
- S5-33 FRT2
  Open (33%) surface with friction top, flat

**Guided belts**

**Reversed guided belts**

**Reinforced belts**

**Design characteristics**
- Suitable for both straight and radius conveying
- Up to 45% open area for excellent air circulation and drainage
- Stainless steel hinge pins for high load capacity, lateral stiffness, fewer belt supports and minimum belt lifting in curves
- No potential belt edge catch points due to safe fixing of hinge pins

Sprockets, profiles, side guards and ball-bearing modules available in different sizes and designs

**Series 9** | Pitch 50 mm (1.97 in)
Belts for medium to heavy-duty food and non-food applications

- Suitable for both straight and radius conveying
- 57% open area for excellent air circulation and drainage
- Stainless steel hinge pins for high load capacity, lateral stiffness, fewer belt supports and minimum belt lifting in curves
- No potential belt edge catch points due to safe fixing of hinge pin

**Available surface pattern and opening area**
- S9-57 GRT
  Open (57%), lattice-shaped surface
- S9-57 NTP
  Open (57%), lattice-shaped surface with nub top

**Guided belts**

**Longer side modules**

Sprockets, profiles and side guards available in different sizes and designs
**Series 11 | Pitch 25 mm (0.98 in)**
Belts for light-duty food and non-food applications

**Series 18 | Pitch 25.4 mm (1 in)**
Belts for light to medium-duty food and non-food applications

---

**Available surface pattern and opening area**

- **S11-45 GRT**
  - Open (45%), lattice-shaped surface with replaceable caps

- **S11-45 GRT HD**
  - Open (45%), lattice-shaped surface with replaceable Hold Down caps

- **S11-33 FRT2**
  - Open (33% for full FRT2 surface area), surface with friction top, flat

**Design characteristics**
- 45% open area provides excellent cooling and draining capabilities
- All plastic lightweight belts (plastic pins)
- Tight radius belt with minimum curve radius of 1.4 x belt width
- Outermost hinge is fixed to the pin to prevent deflection and elimination of potential belt edge catch points
- Suitable for both straight and radius conveying
- Ideal transmission of force due to sprockets offset inwards. Idlers support the belt on the outside

**Available surface pattern and opening area**

- **S18-44 GRT 2.2**
  - Open (44%), lattice-shaped surface

- **S18-44 GRT 2.2 G**
  - Open (44%), lattice-shaped surface and Hold Down Tabs

**Design characteristics**
- All plastic light weight belt suitable for both straight and radius conveying
- 44% open area for excellent air circulation and drainage
- Narrow grid structure of the belt ensures secure handling of even small products
- High curve belt pull capacity offering improved capacity and reliability
- Easy to clean and suitable for conveying of food including direct food contact
- Superior lateral stiffness and rigidity for an all plastic belt

---

Sprockets/idlers and profiles available in different sizes and designs

Sprockets available in different sizes and designs
Apart from designing module and sprocket features for specific applications, selecting the optimal materials is also important in making sure that a belt is well-suited for specific conveying or processing applications.

All materials are tried and tested in the most varied industrial environments. The specific characteristics of the individual materials guarantee ability to handle a wide range of applications.

HACCP requirements

New regulatory requirements are forcing food manufacturers to adopt increasingly stringent hygiene standards and sanitation procedures. Conventional conveyor and processing belts often cannot comply with these requirements, but Siegling Prolink modular belts are designed to effectively support your HACCP concept.

Declaration of compliance

FDA/EU

Siegling Prolink modular belts made of the following materials are proven to comply with FDA 21 CFR as well as the (EU) 10/2011 and (EC) 1935/2004 regulations regarding the raw materials used and the migration thresholds:
