

UK Installation Guidance Note: Allura Colour Plus Tile Replacement

General Advice

Allura Colour Plus is an interlocking, loose lay tile system with a durable and scratch resistant high density pressed vinyl tile top layer. In the event of localised damage that cannot be removed with normal cleaning methods such as deep gouges or heavy impact damage individual tiles can be quickly and easily replaced with the minimum of disruption to the operational requirements of the usage area.

Tools Required

R

Double or triple cup suction lifter

Procedure

1. Place the suction holder diagonally across one corner of the tile, lock the levers on the holder and lift the tile. The tile should now be able to be separated from its adjacent tiles on two sides with the "male" connectors of the adjacent tiles visible.

If the tile does not release from the adjacent tiles on two sides unlock the holder and re-position it on the next corner of the tile. Repeat on the third corner of the tile if necessary until the correct two-sided release of the tile is achieved.

2. Once the tile has been freed from the male connectors of the adjacent tiles place the rubber mallet under the tile to support it and ease the third edge of the adjacent tile away from the tile that is to be replaced. Use the mallet on this tile to separate the last edge if necessary.

Non-Marking Rubber Mallet

3. Remove the tile.

4. Slide the replacement tile (male connectors first) under the adjacent tiles until is loosely, but correctly in position and aligned with the adjacent tiles.

5. Starting with the "female" connecting edge use the mallet to hammer the adjacent tile edge into place. Continue clockwise to make the connection with the remaining edges of the adjacent tiles. Ensure that any joints of the adjacent tiles that may have been disturbed are also secured.

6. Check all four edges of the replacement tiles making sure that the connections are fully made and flush.
