

## Product Specifications Colorex SD / EC

Supply of a hot-pressed dissipative / conductive homogeneous PVC floor covering, in 61.5 x 61.5 cm tiles.

It shall have an excellent indentation resistance of 0.03 mm.

The dissipative or conductive components shall be embedded into the mass of the product, which shall make its electrical resistance linear and insensitive to the degree of wear (lifetime warranty).

The product shall withstand most attacks (mechanical, chemical and acidic) and shall be 100% repairable.

The perfectly homogeneity of the compact product and its high-pressure manufacturing method shall lend these tiles exceptional resistance to abrasion (Group M) and to loads.

It shall be the ideal product for "controlled environments" (clean rooms, hospitals, etc.) and for facilities requiring ESD protection (electrostatic discharge).

The NF-UPEC certified product shall have a UPEC classification of U4 P3 E2/3 C2.

The seams shall be hot-welded with filler rod.
