

# coral<sup>®</sup> move vision FR

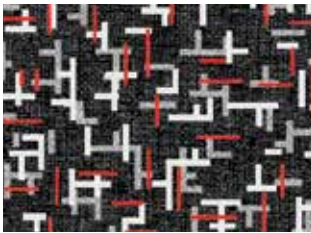

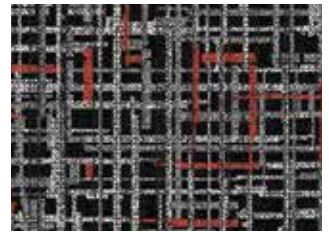

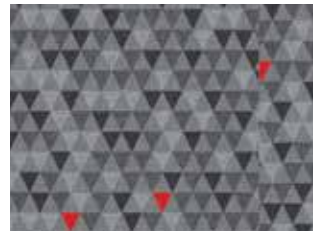

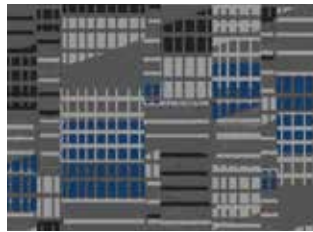

Coral Move Vision FR carpet offers exactly the same technical characteristics as Coral Move FR. The difference however is that Coral Move Vision FR uses a digital printing process, as opposed to pre-dyed yarns being tufted in different design styles, which allows for far greater customisation possibilities in terms of design and colour.

The digital printing process makes non-linear type designs possible, is perfect for more complicated designs or when there are many different colourways within a design. Pantone and RAL colours can be matched.

Clients work with our dedicated design team on an individual project basis to ensure their Coral Move Vision FR carpet meets their precise design and colour requirements.

## Below are some suggested design styles

Available with Pro-Fit  
backing for quicker installation.
