

Forbo's Marmoleum FR² and Striato FR have been independently confirmed as CO₂ neutral floor coverings in the cradle to gate phase of the product's life cycle, without the need for offsetting.

In simple terms, the CO₂ produced in the extraction, transportation and manufacturing process of Marmoleum is balanced by the removal of CO₂ through the growing of its natural ingredients such as flax, jute and rosin.

As such, Forbo Marmoleum is the best flooring choice for every sustainable interior. By using durable materials in your rail projects, you can also contribute to a better environment.

A floor covering made from natural materials.
Key materials from which Marmoleum FR² is created:

- **linseed oil from the seeds of the flax plants**
- **fibres from jute stems**
- **rosin from pine trees**
- **upcycled wood residues from controlled sustainable forestry**
- **limestone**
- **pigments**

A natural floor covering that is strong, durable and sustainable. Marmoleum FR² is a unique offering in the world of resilient floor coverings.

The marmoleum FR² collection is available in five different design styles, including solid and marbled patterns. Within each there is a wide array of colourways to choose from.

FLOORING SYSTEMS

marmoleum® striato FR

Marmoleum Striato FR offers a palette that has neutral and bright colours with warm tones and grey-infused hues spanning from light to dark, delivering natural looking floors that are great on their own and in combination with other floor coverings.

The subtle linear pattern will easily pick up colours from its environment and works well with other materials.
