## SHAPES

LVT Transitions are available in 3 finishes, silver satin, gold polished and chrome polished to complement your LVT.

A uPVC channel with separate tread insert are both available in a range of colours to meet the guidelines set out by the Dementia Services Development Centre (DSDC) at Stirling University.

PVC Cover Joints are positioned between vinyl edges where they cover the joints in a subfloor to reduce the risk of the main floor-covering cracking or splitting. They are not a full expansion joint, but they do help to maintain and protect the floorcovering in a safe condition.

Trims and Ramps are used to protect the floor material edge and reduce the risk of the junction becoming a trip hazard. Different ramp back heights accommodate a range of floorcovering gauges.

Bevel Strips are protective edge trims which help to create a safe transition at floorcovering edges.

More products and colour options in the various categories you can find on the Quantum Flooring website.
